WORLD RADIO TV HANDBOOK

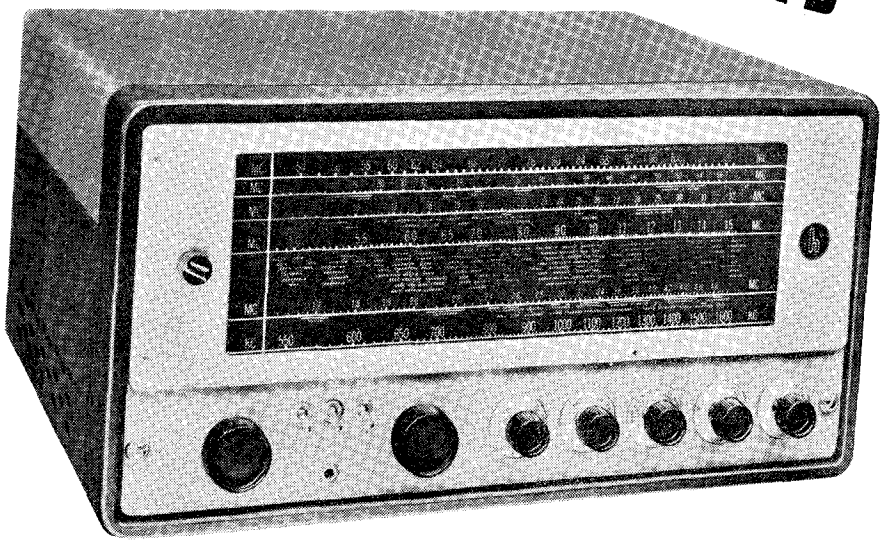
15th Anniversary edition

BROADCASTING TELEVISION

1961

The World's Most Versatile Receivers

are made by hallicrafters



The Model SX-62A for example

For listening to local broadcast, FM or worldwide shortwave stations, you simply can't beat this brilliant performer. Through this single package unit you have at your fingertips more commercial and broadcast stations than with any other receiver on the market because it covers frequencies from 550 kc through 32 mc on amplitude modulated bands and from 27 mc to 109 mc on FM or AM bands. What's more, reception of musical programs is comparable with present day high fidelity amplifiers, thanks to a 10-watt push-pull audio circuit, flat from 50 to 15,000 cycles. Look the world over, for economy, versatility, for sound performance a better value than the *Hallicrafter's Model SX-62A* will be hard to find. For complete specifications write to department WRH3 for bulletin.

These publications will help you to get the best from your receiver and to keep your WORLD RADIO HANDBOOK up to date.

SUMMER SUPPLEMENT TO THE WRH 61

In June/July 1961 we can send you a supplement to WRH with corrections of the WRH 61, including summer schedules of the most important short wave stations all over the world. In order to be able to estimate the size of circulation, please send your order as early as possible. The price, including postage, will be: Da. Kr. 6.50, £ 0/7/–, $ 1.00, Sw. 5.00 or DM. 4.00.

WORLD RADIO BULLETIN

will keep your WRH up to date. It is a valuable fortnightly supplement to the WRH, and contains the latest news from broadcasting stations all over the world, and thus enables you to keep the contents of the WRH up to date. Prices: Airmail: Annually: Da. Kr. 38.-, £ 2/-/-, $ 5.65, DM. 25.-, Quarterly: Da. Kr. 10.-, £ 0/11/0, $ 1.50, DM 6.50. Ordinary mail: Annually: Da. Kr. 22.-, £ 1/6/0, $3.50, DM 15.00. Quarterly: Da. Kr. 6.00, £ 0/7/0, $ 1.25, DM 4.25.

HOW TO LISTEN TO THE WORLD

An invaluable companion to the WRH and a guide to better reception of medium waves, short waves, FM and television. Hints and tips by experienced world listeners in all parts of the world. This book contains numerous valuable articles for your hobby f. inst.: How to listen to FM and Television stations, to Amateurs, Time Signals and Weather Reports. How to learn languages by radio. How to build aerials. Articles for better understanding of radiotechnic etc. Prices: Da. Kr. 6.50, £ 0/6/6, $ 1.-, DM 4.00, Sw. Kr. 5.00 plus transport: Da. Kr. 0,65, £ 0/0/7, $ 0.10, DM 0.35, Sw. Kr. 0.50. – Price incl. postage: Da. Kr. 7.15, £ 0/7/1, $1.10 DM. 4.35 Sw. Kr. 5.50.

Prices for the **WORLD RADIO TELEVISION HANDBOOK:** Da. Kr. 16.50, £ 0/16/6, $ 2.50, DM. 10.50, Sw. Kr. 12.50 plus postage: Da. Kr. 1.20, £ 0/1/3, $ 0.20, DM. 0.70, Sw. Kr. 0.50. **Prices incl. postage:** Da. Kr. 17.70, £ 0/17/9, $ 2.70, DM. 11,20, Sw. Kr. 13,00.
Price Spanish edition: Da. Kr. 18.00, £ 0/18/6, $ 2,50, DM. 12.00, plus postage: As for the English edition.

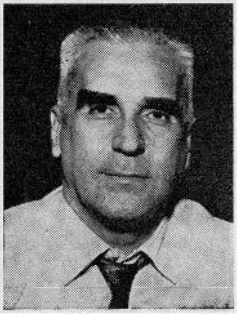
PREFACES

With this edition World Radio TV Handbook celebrates its 15th jubilee. During this period the purpose of this publication has been "The promotion of understanding between the peoples of the world". The various prefaces in this and earlier editions and the laudatory statements that have been received on the occasion of this 15th anniversary from practically all broadcasting organisations, irrespective of politics, race and religion, reproduced in a special pamphlet, cause me to hope that WRH has fulfilled its task and served its purpose in a satisfactory manner. My hearty thanks are due to radio and television organisations and to radio clubs and listeners all over the world, whose interest and assistance have been of the utmost value. Finally, my sincere thanks are also due to WRH's many advertisers and collaborators for their confidence and support. This international cooperation. upon which the existence of WRH depends, will, I thrust, continue on into the future.

O. Lund Johansen.

THE "GOLDEN AGE" OF COMMINICATIONS



Dr. HERNANE TAVARES de SA

In the year gone by, there has been hardly a week without word of some new technical achievement, sometimes of startling magnitude. We have been permitted to see the hidden face of the moon; we have spoken to a mechanism in space and have made it reply across millions of miles; men and women have watched at home the faces of two dogs in orbit around the earth; words and music have bounced from continent to continent by way of a man-made sphere in the sky.

On the ground there has been constant (if less spectacular) progress. Television has reached out to new millions, sound radio speaks to increasing populations through the wider availability of the transistor portable receiver. To these processes, the WORLD RADIO TELEVISION HANDBOOK remains a constant and invaluable guide.

We are in what could be called 'the golden age' of communications, a time when the word and the image can be thrown from continent to continent with an ease unimagined not so long ago. Our tools have been sharpened to new degrees of effectiveness and sophistication.

But how do we use them?

What is it that we choose to say to one another, with the help of the new marvels? With all the power of communications at our command, do we really communicate? This is a sobering process, this turning of the attention from the way to the word, from the means to the end. Yet it is necessary. For it reveals at once the poverty of what we communicate compared with the wealth of our technique. It is only when we begin to tackle this question of aims and purposes with the vigour we have up to now spent on technology that the world will make a significant stride towards a more worthy destiny.

Dr. Hernane Tavares de Sa
Under-Secretary for the Office of
Public Information, UNITED NATIONS

THE EUROPEAN BROADCASTING UNION AND INTERNATIONAL COOPERATION

C. GILLIERON

With the development of each new technique for the transmission of thought, whether it be printing, the cinema, radio or television, the public wonders if this new means of communication between men will be of service to humanity and whether it will procure a better future or fresh evils.

These techniques will be whatever those responsible for them make of them. By its very nature, the medium of the Hertzian wave radio is essentially international. Since its birth radiophony has demonstrated the need for real international cooperation, and as early as 1924 the International Broadcasting Union was created in Geneva. In 1950, it was succeeded, in part, by the European Broadcasting Union, which is concerned with both radio and television. This is a professional organisation of broadcasting services of countries fulfilling certain statutory conditions who wish to work together towards the development of broadcasting and international understanding from the technical, legal and programme points of view.

The EBU lends its good offices to the settlement of difficulties at international level, the elimination of obstacles from the exchange of programme material, the development of technical studies and the centralisation of information and documentation on legal questions; it has an ever-increasing part to play in the production of programmes which, in one way or another, serve the cause of international understanding.

In this field Eurovision, created five years ago by the EBU, has already exchanged more than 1000 programmes, of a duration of 1320 hours, produced by members of the Union. Apart from objective information, news and sport, great importance is given to exchanges of a cultural nature and to broadcasts for children and young people.

Special Programmes for DXers, young people and jazz fans

Please write in for free illustrated programme schedule

(for full details se page 102)

The Union is also the supporter of numerous activities and manifestations inherent in international life. In this respect we should mention United Nations Day, Red Cross Day, World Children's Day instituted by the International Union for Child Welfare and the different forms of exchanges arising out of the EBU's cooperation with UNESCO, the International Labour Organization, the World Health Organization, the International University of the Air, the International Music Council, the International Film and Television Council, to quote only a few.

In conclusion, if we consider the importance of broadcasting which is being introduced into every home, we cannot but pay tribute to the men of good will who are responsible for this new technique and who work day after day throughout the whole world to make their different cultures better known and in this way to bring about a greater understanding between the peoples. This is the role that Mr. O. Lund-Johansen adopted 15 years ago in editing THE WORLD RADIO TV HANDBOOK, and we wish to thank him for his excellent work.

C. Gillieron
Director, European Broadcasting Union

"THE INTERNATIONAL SIGNIFICANCE OF RADIO"

REX KEATING

With the celebration of its 15th Anniversary, "THE WORLD RADIO TV HANDBOOK" now occupies a significant place in the international field of radio:

Of all the mass communication media, broadcasting is probably the most persuasive, unsurpassed in speed, range and economy. Unfortunately many obstacles prevent it being fully used to promote the free flow of ideas between countries. In world terms there are today some 9000 broadcasting stations and 335 million radio receivers, yet no less than two-thirds of these are concentrated in Europe and North America. In Asia and Africa there is also an acute shortage of efficient receivers to pick up even local broadcasts and it is estimated that to provide each family in these areas with a radio set would demand no less than 350 million additional receivers. An important step in the solution of this problem has been taken by UNESCO in arranging with the International Telecommunications Union for a study of low-cost radio receivers – their design and large-scale production.

In a rapidly shrinking world there is an urgent and everincreasing demand for a closer mutual understanding amongst men and women of all nations. The mutual appreciation of the cultural values of Orient and Occident, for example, is a major preocccupation of UNESCO and the role which radio can play in furthering this ideal is of the utmost significance. Despite differences in style and presentation, techniques, language, etc. considerable success has been achieved in the exchange of programmes and of producers.

Something else with which UNESCO is very much concerned is the quality of the intellectual contribution of those who work in the mass media. More important even than the acquisition of new techniques and skills is the appreciation of the personal responsibility which the radio producer should feel towards the community in which he lives and of which he is a servant. For, in using broadcasting, he is employing one of the most powerful instruments of mass communication, a force which should be used, always, for constructive ends and to uphold the dignity of man.

Rex Keating
Acting Head, Radio Section UNESCO

POUL FONTAINA
President

ASOCIACION INTERAMERICANA DE RADIODIPISION (AIR), URUGUAY

WRH fulfils to a high degree a mission in the radio world. The amalgamation of joint American private transmitters (AIR) sets great store on the practical and valuable service rendered by WRH both in regard to those engaged in broadcasting and those who wish to be informed of world events, – WRH's value as a means of promoting understanding between the peoples of the world is incontestable and will inspire radio peoples to surpass each other.

Poul Fontaina
President

INTERNATIONAL TELECOMMUNICATIONS UNION – GENEVE

May we offer you our hearty congratulations for the fifteenth anniversary of your excellent publication. We have always admired the care with which it is edited and consider that it must prove invaluable to all who consult it. In fact, we often do so ourselves. Whenever occasion offers, we make a point of bringing the existence of this handbook to our correspondents. We do so in the belief that your handbook is a valuable medium for the promotion of international understanding.

C. Stead Counsellor.

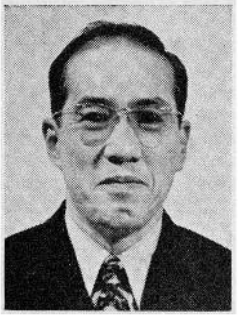
THE INTERNATIONAL SITUATION CALLS FOR GREATER UNDERSTANDING AND FRIENDSHIP



SEIKI SAKIYAMA

It is a great honour and pleasure for me to extend my sincere felicitations to you on the occasion of the 15th anniversary edition of your "WORLD RADIO TV HANDBOOK" which contains all the facts concerning radio and TV broadcasting stations of the world as well as related international organizations.

There is no need to dwell upon the great cultural significance of radio and television in this age of powerful mass communication.

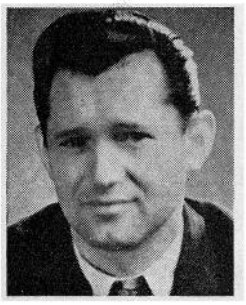
Especially, under the present international political situation, which calls for greater understanding and friendships among world nations, the importance of radio and television has markedly increased.

We believe that your publication, providing a bird's-eye-view of the world radio and TV organizations, has made remarkable contributions towards the promotion of the beneficial functions of radio and television.

We ardently hope that your organization will prosper and will make further contributions to the cultural exchanges and mutual understanding among the nations of the world.

Seiki Sakiyama, Secretary General
The Third Asian Broadcasters' Conference

RADIOMEN OF VARIOUS COUNTRIES SHOULD MEET EACH OTHER



KAREL HOFFMANN

Since the last days of the Nazi occupation of Czechoslovakia were over in 1945, when broadcasting played an important role in the rising of the people, Czechoslovak Radio has become a significant element in helping to organize new life.

Radio informs the widest public of both home and foreign affairs and prepares many popular scientific, music and sports programs as well as such for children and youth, and also other broadcasts of an educational and entertaining character.

Informative, literary, musical and other programs give listeners a picture of the life and culture in foreign countries. Czechoslovak Radio develops these activities in the spirit of peaceful co-existence and mutual understanding among the nations of various countries, regardless of their social setting.

Almost a quarter of a milion letters sent in by Czechoslovak listeners and more than one hundred thousand letters received from listeners of 67 foreign countries give evidence that Czechoslovak Radio is solving its task with success: to provide listeners, with true and up-to-date information and with entertainment and education alike.

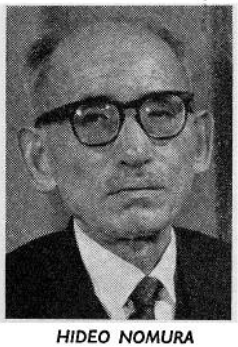
We are also engaged in an effort to develop mutual program exchange and other means of co-operation with broadcasting organisations the world over. This is being done with particular success in the field of music. For example radio organisations of 33 countries from all continents have asked for tape recordings and direct relays of this year's International Music Festival »Prague Spring«.

We were and we still are of opinion that radiomen of various countries should meet each other in order to bring the life and culture of other lands nearer to their listeners, thus helping in getting the nations closer together. Therefore our Radio takes an active part in the activities of various international organisations, participates in the International Radio University and exchanges delegations and staff groups with 45 foreign broadcasting organisations. With a number of them we have mutual agreements of mutual collaboration.

THE WORLD RADIO HANDBOOK greatly helps in developing this collaboration and mutual friendly relations of sound and television broadcasters throughout the world. On the occasion of its 15th anniversary we wish it much success in the fulfilment of this noble task.

Karel Hoffmann, Director General of Ceskoslovenský rozhlas

THE PEACE OF WORLD WILL BE ATTAINED THROUGH INTERNATIONAL UNDERSTANDING



HIDEO NOMURA

On this occasion we extend our hearty congratulations to Mr. O. Lund Johansen on the publication of the fifteenth edition of WORLD RADIO TV HANDBOOK.

The peace of the world, in our opinion, will be attained through international understanding, and, in this sense, the NHK's International Broadcasting Programs are extensively broadcasted to every corner of the world.

And it is a matter of congratulation that more cooperation in the production and exchange of programs is actively done now between broadcasting-stations in different countries. The broadcasting business plays a vital role in the establishment of a lasting peace on the earth, and, for this lofty goal, we should listen more to the radio.

For the accurate, quicker radio and television reception everywhere, WORLD RADIO HANDBOOK furnishes us with all necessary information. We sincerely hope that this book may find many more friends of radio and television in every country and that it will attain higher success in years to come.

Hideo Nomura, President

ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR):

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 4000 broadcasting and 400 television stations. Its purpose is to preserve free and stable broadcasting, promote cooperation between broadcasting corporations and the public authorities, to raise the cultural level of the peoples, to work for the preservation of freedom of utterance and instruction and a closer feeling of association between the private broadcasting corporations on the American Continent. AIR has energetically represented to the Argentine Government that all transmitters be immediately returned to private ownership. AIR has agreed with Sociedad Interamericana de Prensa about the revision of the so-called Panama Doctrine for the purpose of increasing the practical effectiveness of that pact and of making it a permanent means of defence for the preservation of democratic principle. AIR is recognized by the United Nations ond collaborates with UNESCO, with the International Union of Telecommunications, with the organizations of the American States. AIR has subscribed to the "Panama Doctrine" in which the American Radio and Press declare themselves united against any attack on individual liberty and any restriction of the freedom of utterance. During the current year the institution has had intensive activity in defense of freedom of information in connection with events occurring in several countries.

AIR's President is the Uruguayan Broadcaster Sr. Raúl Fontaina, Mercedes 973, Montevideo, Uruguay. Vice Pres's: Lic. J. L. Fernandez (Avda Chapultepec 18, Mexico D. F.); F. Eleta (Apdo 1795, Panama), Secr.: R. Trabanino (5 Calle Poniente 9, San Salvador) – **Central Office, Dir. Gen.:** Manuel Caballero Ferreira, Av. Uruguay 1031, Esc. 2, Montevideo. **Cable:** IAAB, Montevideo.

ASIAN BROADCASTERS UNION

At the Third Asian Broadcasters' Conference, held in Tokyo for three days beginning on May 1960, lively discussions arose on the possibility of the establishment of an **Asian Broadcasters' Union.** However, a definite conclusion was not reached at the Conference, and, therefore, at present an Asian Broadcasters' Union has not yet entered the stage of formal organization.
The Conference, whose Secretary General was Seiki Sakiyama, Nippon Hoso Kyokai (The Japan Broadcasting Corporation), was attended by delegates from 15 countries (Afghanistan, Ceylon, Taiwan, India, Indonesia, Iran, Israel, Japan, Laos, Malaya, Pakistan, the Philippines, Thailand, Turkey and Vietnam) and an observer representing the United Nations and UNESCO. More than 40 proposals were submitted to the Conference for deliberation. It was also decided that the fourth Asian Broadcasters' Conference will be held next year in Kuala

GATES

BROADCASTING EQUIPMENT

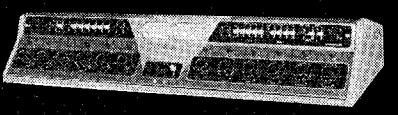
GATES is the largest supplier of AM radio broadcasting equipment in the U.S.A. The prime reason for GATES' popularity everywhere is that while maintaining the highest standards of Quality, GATES equipment is always competitively priced — and equally important — costs less to install and operate. Why not write today for descriptive literature and engineering data on this modern GATES equipment.

● All GATES Transmitters are now greatly reduced in size due to the introduction of SILICON DRY RECTIFIERS replacing the old High and Low Voltage Rectifier Tubes. In addition to the size advantage, these Rectifiers provide almost unlimited life and assure rugged, dependable performance in all climates of the world.

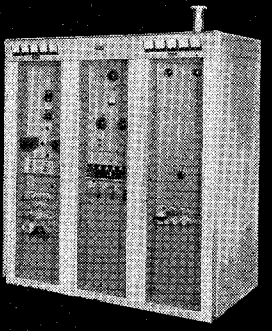
● A full line of AM Broadcasting Transmitters including 250 watt, 500 watt, 1 KW, 5 KW, 10 KW, 20 KW, 50 KW and 100 KW. Also FM Broadcasting Transmitters including 10 watt, 50 watt, 250 watt, 1 KW, 5 KW and 10 KW. A complete line of Shortwave Broadcasting Transmitters: 1 KW, 5 KW, 10 KW, 20 KW, 50 KW and 100 KW.

● Complete Television Systems, using 100 watt, 500 watt, 5 KW and 10 KW Transmitters for both FCC and CCIR standards.

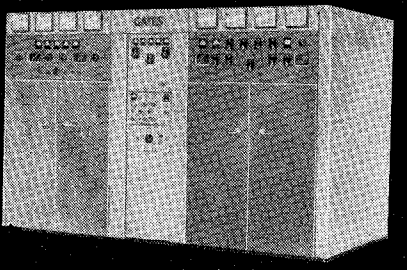
● Speech Input Equipment • Transmitter Control Consoles Master Control Consoles • Speech Input Consoles Plug-In Preamplifiers • General Purpose Consoles Transcription Turntables • Mobile Sound Effects Console Automatic Programming Equipment • Remote Amplifier Equipment • Directional Phasing Equipment Oscillators • Remote Control Equipment.



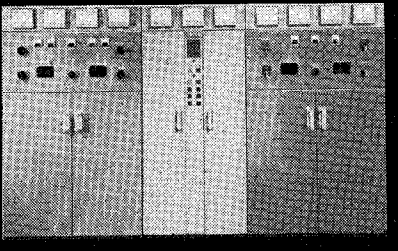
Dual Channel Console.



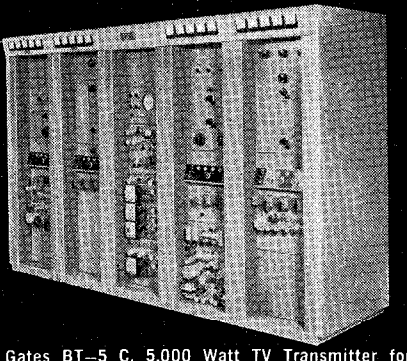
Gates FM–10A, 10,000 Watt FM Broadcast Transmitter.



Gates HF–50 C, 50,000 Watt High Frequency Broadcast Transmitter.



Gates BC–50 C, 50,000 Watt AM Broadcast Transmitter.



Gates BT–5 C, 5,000 Watt TV Transmitter for both color and monochrome transmission.

BROADCASTING FOUNDATION OF AMERICA

The Broadcasting Foundation of America is organised as an educational corporation and is also the international division of the National Educational Television and Radio Center. Its object is to foment the exchange of Radio and Television programs of a cultural and informative nature between the main stream of Broadcasting in the United States and the broadcasting stations and organisations of other countries. American radio station membership of BFA, consisting both of commercial and educational stations, has grown to 185 stations broadcasting music and spoken word programs that enable the people of the United States to listen directly to the peoples and cultures of the rest of mankind. 42 countries now send programs to BFA for distribution in the United States. Now that the 50 educational television stations of the National Educational Television and Radio Center are available as outlets for international television programs efforts are being made to intensify the exchange in television. BFA is an associate member of the EBU and is the official American organisation for selection and presenting entries to the Prix Italia and the Grand Prix Eurovision (Cannes).

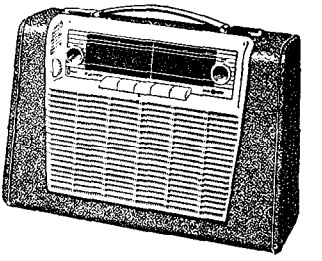
PORTABLES OF REAL QUALITY

KURER TRANSI

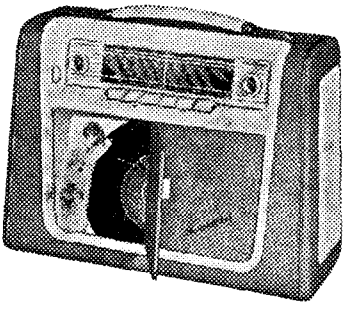
Special export version with 3 shortwaves and AM



4 wave bands	Push-button system
10–600 metres continuous	Non-breakable dial
Built-in aerial	Smart and handy
Battery – operated	Supreme tone
7 transistors and 2 diodes	Always ready for use

COMBI STAR

Transistorized

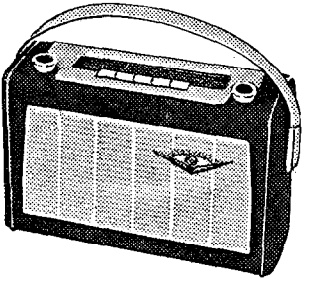


4 wave bands	Push-button system
16 – 2000 metres	Non-breakable dial
Built-in aerial	Smart and handy
Battery operated	Supreme tone
7 transistors and 2 diodes	Always ready for use

A Combination 4 – Band AM Receiver and 45 R.P.M. Record Player

TRANSAUTO

A Combined portable and car radio



3 wave bands	Non-breakable dial
Shortwave 16 – 53 metres,	Smart and handy
Medium and Long	Supreme tone and volume
Battery operated	Excellent performance
7 transistors and 2 diodes	Super sensitivity
Push-button system	Always ready for use

The Transauto is easily placed and locked in a mounting frame under the dashboard, and automatically connected to cars' aerial and battery

Light in weight and small in size

When used as portable: Built-in, Ferrit- and Loop aerials and operated by 4 flashlight batteries

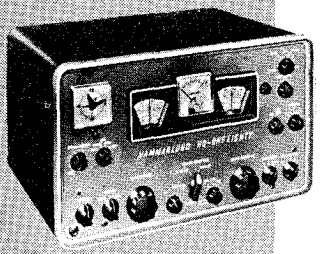
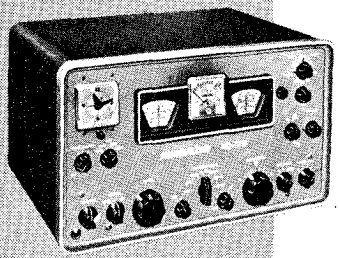
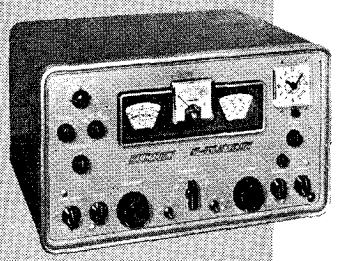
HAMMARLUND

COMMUNICATIONS EQUIPMENT

Approved by the World's Most Renowned Technicians Military and Amateurs throughout the World!







The HAMMARLUND receivers are products of the world's leading manufacturer of communications receivers, combining the latest technical developements in the communications fields together with the features that have made Hammarlund receivers outstanding for more than 50 years . . .

HQ-180 **Professional performance at amateur price!**

A general-coverage, SSB receiver of outstanding performance and quality designed for the most exacting requirements of both the commercial and amateur users. The HQ - 180 embodies the most modern tuning techniques for optimum performance in the most crowded bands, featuring extreme sensitivity. Continuously tunable from 540 KCS to 30.0 MCS. A 17-tube, triple conversion superheterodyne circuit with automatic noise limiter. Automatically adjusts audio response to fit receiving conditions.

HQ-170 **Offers everything the amateur needs for solid contacts in AM or SSB operation.**

An exceptional receiver especially designed to meet ALL the requirements of modern SSB/CW and AM/MCW reception, offering a practically endless combination of tuning techniques. It features the exclusive Auto-Response which automatically adjusts the audio pass-band to best meet the receiving conditions. A 17-tube, triple conversion superheterodyne circuit with automatic noise limiter. Full coverage of 6, 10, 15, 20, 40, 80 and 160 meter amateur bands.

HQ-145 **Unparalleled value!**

Offers a degree of sensitivity far beyond ordinary communication receivers. New standard of performance in tuning techniques through the combination of an adjustable 60 db slot filter and the exclusive Hammarlund crystal filter guarantees a solid contact with the weakest signals in the most crowded bands. A 11-tube, superheterodyne featuring dual conversion. Continuously tunable from 540 KCS to 30 MCS in 4 bands.

Write today for catalogs and prices on these and other Hammarlund Communications equipment.

A SUPERB SSB AMATEUR TRANSMITTER

100 Watts of Undistorted Performance!

The HX-500 offers the best in SSB, DSB. CW, FM, FSK for RTTY plus 40 cps identification Keyed Shift. It operates on the 3, 5, 7, 14, 21 and 28 to 30 MCS bands. All operational controls are located on the front panel. The separate scale for each band provides a readout better than 200 cps. After warmup stability is better than 100 cps. Overall audio response is 300 to 2300 cps. HX-500 truly represents the best of all transmitters in every respect.

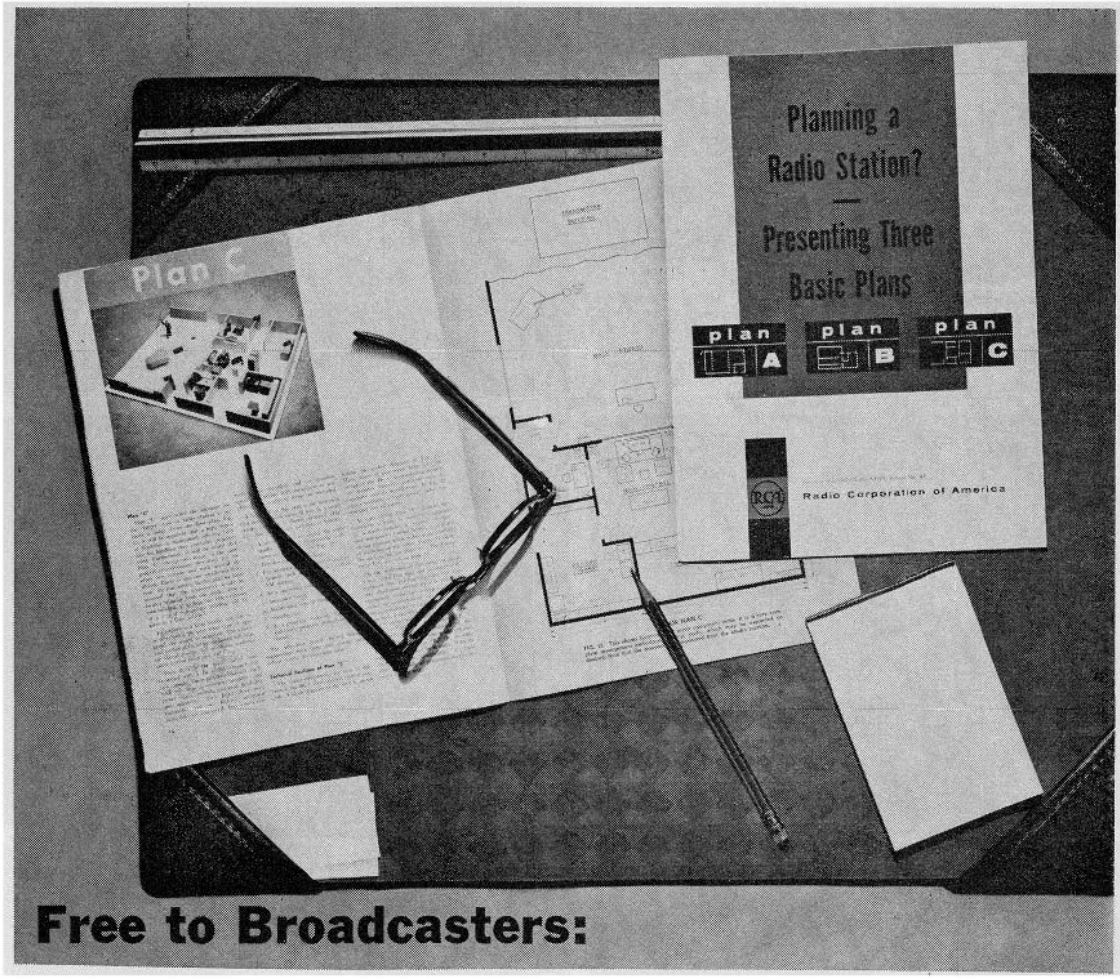
The Editor of the World Radio Handbook seeks information from all stations engaged in broadcasting and interested in international broadcasting and publishes the information as communicated to him by the stations. The Editor cannot be held responsible for the correctness of this information or for not publishing schedules and other particulars of stations which do not supply these information or for changes in the times and wavelengths of programmes made after the current edition has gone to press.



Free to Broadcasters:

"Planning a Radio Station"

A Series of Three Articles That Describe an Intelligent Approach to Station Design

This RCA-published booklet contains three separate plans: one for the small station with a single plant; one for the larger station that houses both transmitter and program facilities in one building and a third plan that separates studio facilities from the transmitter and its associated equipment.

Single copies of "Planning A Radio Station" will be sent to broadcasters upon request. Simply request your copy on your organization's letterhead indicating your title and function in the organization.

Please send all requests to the address most convenient to you:

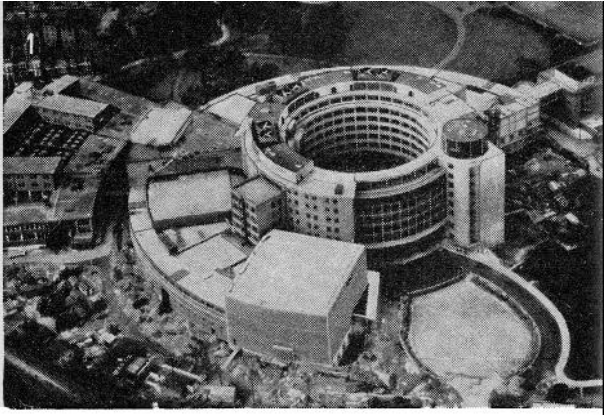
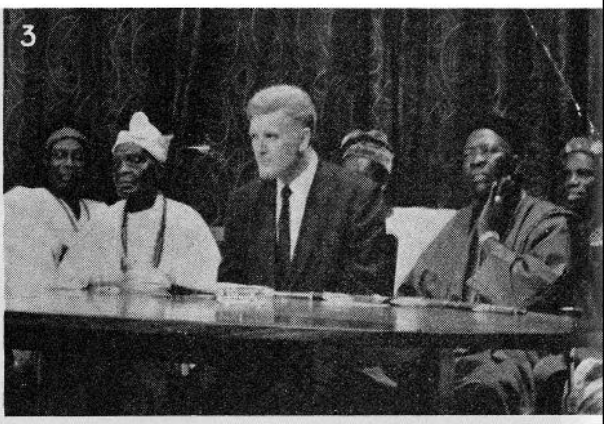
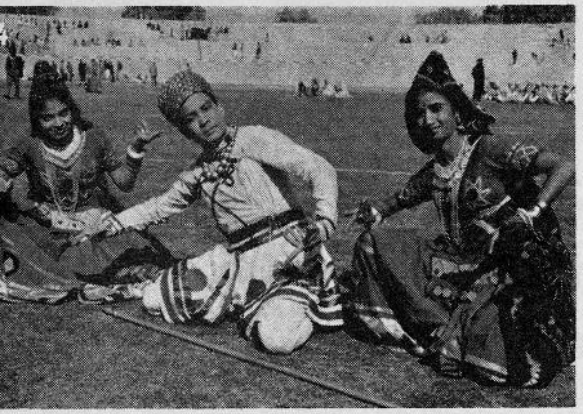
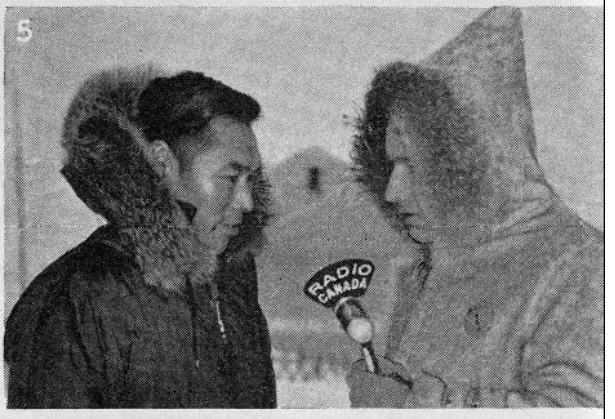
5. **Canadian Broadcasting Corporation, International Service:** English-language reporter Gordon Mesley interviews a citizen of Canada's North on his home terrain.

6. **Ghana Broadcasting System:** Kumasi Manhyia Adenkum Band. one of the vocal and percussion ensembles found among the Akan people of Ghana. The Adenkum, the instrument after which this type of group is named, is a gourd with a long neck containing stones put in for rattling effect. The chorus is usually female, though men are allowed in the percussion section.







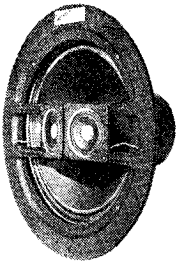


BROADCASTING AND COMMUNICATIONS EQUIPMENT FOR PROFESSIONAL USE

You Can Depend On EMEC For All Your Studio Needs

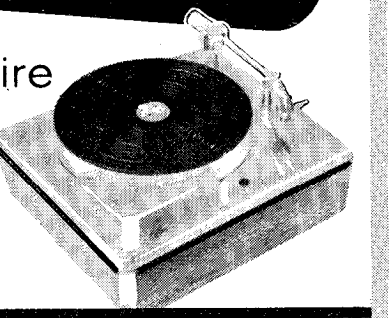
Bozak

Loud Speakers and Speaker Systems for faithful sound reproduction. Most popular studio and broadcast speakers in the United States



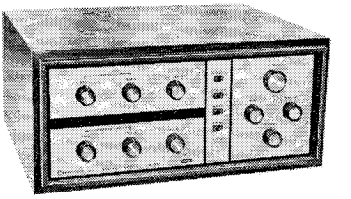
audio empire

Professional Turntables, Transcription Arms and Cartridges that achieve high fidelity reproduction of both stereo and mono records



Koss

Stereophonic and Monophonic Head Sets for realistic monitoring



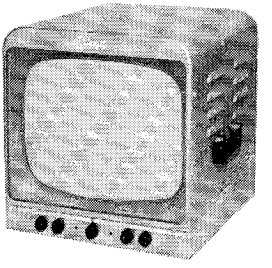
harman kardon

Citation Amplifiers, Preamplifiers and professional broadcast FM Tuners – the ultimate in studio design

Miratel

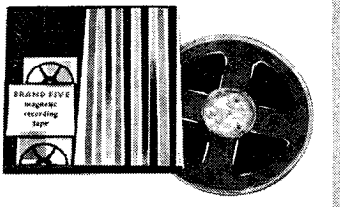
INCORPORATED

Broadcast, Industrial and Closed Circuit TV Monitors, Voice Operated Relays (VOR) VHF Communications Receivers: Conelrad Equipment: RF/Video Tuners: Citizen Band Transceivers



Ferrodynamics

A complete line of professional quality BRAND FIVE magnetic recording tapes. Provides unsurpassed recording quality at minimum cost



MAKE EMEC YOUR ONE-STOP SOURCE FOR QUALITY ELECTRONIC EQUIPMENT! Reduce buying costs and speed-up deliveries by purchasing all your requirements from a single, reliable source of supply.
EMEC is the exclusive export division for leading American manufacturers of BROADCASTING and COMMUNICATIONS EQUIPMENT.
The products described above are merely representative of the wide assortment of professional studio equipment now available.

Write today for catalogs and price information!

EUROVISION IN 1961

G. Hansen, Director of the E.B.U. Technical Centre, Brussels.

The operations room of the E.B.U. International Television Control Centre in Brussels. In the forground, Mr. E. H Griffiths, Head of the Eurovision Section of the E.B.U. Technical Centre.

Every year sees more and more exchanges of television programmes between the Members of the European Broadcasting Union and there is, so far, no sign of a levelling-off in the rising curve; in fact, just the reverse. In 1960 about nine transmissions were organised by the E.B.U. every week compared with seven in 1959 and five in 1958. These figures do not include the many programme exchanges between two or three neighbouring countries, usually speaking the same language, for which the E.B.U.'s help is rarely needed. One major reason for such an increase is the development of the "television news summary". "Hot" news film is sent through the network at off-peak times for recording and subsequent transmission in Members' news bulletins. 1959 and 1960 have been remarkable for the personal tours undertaken by many leaders of the great powers. Wherever they went, these peripatetic statesmen were dogged by the newsreel cameras and this, more than anything else, brought the television news summary into its own.

Every year also sees an expansion of the Eurovision network and more countries taking part in the exchanges. The Norsk Rikskringkasting (Norway) is now permanently linked to the network. In June, 1960, a reversible link was opened between Finland and Sweden which made it possible to send pictures from Finland to all the countries connected to the Eurovision network; transmission to Finland has been possible since 1959. The opening, in September, 1960, of a reversible link between Yugoslavia and Italy enables the Jugoslovenska Radiotelevizija to take part fully in the exchanges. The link to Spain is now permanent. (It may be recalled here that it was on 2nd March, 1960, that the first pictures were brought across the Pyrenees via a temporary radio-link put up at very short notice, on the initiative of the French). It is now also possible to get pictures from Corsica; the first live broadcast from Ajaccio took place on 15th August. But certainly, as regards the network, the most remarkable technical achievement which took place in 1960 is the setting up of a link between France and Algeria over the Mediterranean. The path, extending from Fontfrède near Perpignan to Bouzareah near Algiers, is approximately 630 km long; an intermediate relay has been installed on the Puig Mayor in Majorca, which lies approximately halfway between the two. These 300 kilometre "hops" have been made possible by the utilisation of tropospheric scatter. The links work in the 4000 Mc/s band with a transmitter power of 500 W. The results obtained so far have been very encouraging and it is hoped that a regular service will be possible during most of the year. The chain is one-way for the time being, from France to Algeria, but in due course a second chain working in the other direction is to be installed. The Fontfrède installations will later be transferred to the nearby Pic Néculous.

Exchanges of television programmes with countries of Eastern Europe such as Czechoslovakia, Hungary, and Poland, have already taken place and it will be possible to receive live pictures from Moscow, through Finland as soon as the Moscow-Tallinn link is put into operation, possibly at the end of 1960 or at the beginning of 1961. The technical, legal and administrative problems raised by such exchanges between Western and Eastern Europe have been discussed by E.B.U. and O.I.R.T. delegates at a meeting in Geneva in February, 1960.

Here then are some data on Eurovision exchanges and on the radio-links network but what interests the viewer most are the programmes themselves. Which of them will he remember? Possibly the programmes mentioned earlier which enabled him to see the political leaders of our divided world. Sports enthusiasts were able to appreciate, for example, the football matches transmitted from Spain, the international skiing competition from Yugoslavia or the Tour de France cycle race (of which some excellent pictures were transmitted from a helicopter, the early trouble with fading having been largely overcome). Others may have preferred Princess Margaret's Royal Wedding, and others still the Eurovision song contest and the victorious Tom Pillibi. But, it is probably the magnificent pictures of the Olympic Games in Rome which all viewers will remember, not only the sports enthusiasts but the others also to whom they quite often revealed the beauty of athletics. Tribute should be paid to the gigantic effort of the R.A.I. which has been crowned by a splendid success.

Such is briefly described, in the course of its expansion, the stage reached by Eurovision at the time of writing, 1st October, 1960.

a single source of supply THAT SOLVES YOUR TECHNICAL PROBLEMS . . . AND SAVES YOU MONEY

COMPLETE COMMUNICATIONS OR BROADCASTING SYSTEMS — REGARDLESS OF SIZE OR APPLICATION.

ROCKE INTERNATIONAL acts as either the international division or the export representative of more than twenty-five American firms who manufacture equipment ranging from microphones and klystrons to complete broadcasting stations.

In addition to offering this equipment, Rocke International has broadened its services to include specifications of all related equipment, design of special equipment and complete systems, local surveys, supervision of installations and even the design and supply of buildings to house a broadcasting station or communications operation.

Rocke International Systems Include:

- **COMMUNICATION**
- **BROADCAST**
- **TELEVISION-BROADCAST**
- **TELEVISION-INDUSTRIAL**
- **AUDIO EQUIPMENT**
  (tape recorders, microphones, loudspeakers, etc.)

With full assortment of products in these fields, Rocke International can meet your complete requirements. Purchasing from one source keeps your procurement costs at a minimum, speeds delivery and establishes a single commercial and technical responsibility.

INTERVISION

By Ales Suchy, Secretary of the OIRT Television Commission

Creation of Intervision

The OIRT Administrative Council decided at its Budapest session in January, 1960, to create an international system of exchange of television programmes—INTERVISION. In its initial stage of development this connects the following television organizations:
Czechoslovak Socialist Republic: Ceskoslovenskà televize, Prague.
German Democratic Republic: Deutscher Fernsehfunk, Berlin.
Hungarian P.R.: Magyar Televizio, Budapest.
Polish P.R.: Telewyzja Warszawa, Warsaw.

By the end of 1960, the direct exchange of television programmes was possible on radio relay lines of an overall length of about 3,000 km. The programmes exchanged can now be received by some thirty television stations serving nearly 10 million viewers. Facilities of connecting the system to that of the Eurovision are also available, and a number of programmes have already been exchanged with the television organizations participating in the Eurovision system.

In the course of 1961, the Soviet Television with its broad network of television studios and stations will be connected to the Intervision system, and in the 1961–62 period also the television organisations of the P.R. of Bulgaria and the Rumanian P.R. It is also supposed that in future the television organizations affiliated to the OIRT and situated outside the European zone will be connected to the system.

Aims of the Intervision

In creating the Intervision, the OIRT aims at aiding realization of the noble ideas of peace, mutual understanding and friendship among peoples as well as the exchange of cultural values, authentic information on the life of peoples as well as broadcasts of important international events, scientific and technical broadcasts, broadcasts of sporting events, and enriching the programmes of television centres affiliated to Intervision by broadcasts serving humanitarian, educational, and instructive aims.

Intervision membership

Countries affiliated to the OIRT and availing of technical facilities for direct exchange of television programmes become automatically members of Intervision. Non-member organizations having adopted the Intervision Statues may also take part.

Organization of the television programme exchange

The direction of Intervision is effected by the OIRT Television Commission which deals with the essential programme and organizational questions while a Programme Council has been created for working out the plan of exchange of television programmes between Intervision members as well as with other television organizations or systems. The present chairman of the OIRT Television Commission and the Intervision Programme Council is Mr. H. Adameck, Director General of the Deutscher Fernsehfunk (German D.R.).

The system used for the control of the network is based on the experience gained in previous years in direct exchange of television programmes between some OIRT member-countries, as well as on the results of the work of the specialized Study Groups of the OIRT Technical Commission and of the C.C.I.R.

Activities of the Intervision system in 1960

In the first year of its existence, the Intervision has organized a number of direct exchanges of television programmes of various character both among its present member-organizations as well as with the Eurovision system and some individual member-organizations of the latter. In the course of this first year of its existence, programme exchanges among the Intervision members became a permanent part of the current programmes of the television organizations in the affiliated countries.

As far as the exchange with the Eurovision network is concerned, negotiations between the OIRT and the E.B.U. representatives took place in Geneva in February, 1960. Both organizations were especially interested in direct transmissions of cultural, musical, sporting, popular-scientific and children's broadcasts. In the course of 1960, a number of programmes were exchanges between the Intervision and the Eurovision systems. A considerable part of these transmissions were broadcasts of topical interest and sporting events, the most important of them being the transmissions from the 1960 Olympic Games in Rome.

Rocke Intercontinental

SPECIALISTS IN COMPLETE COMMUNICATIONS OR BROADCASTING SYSTEMS IN ALL SIZES AND APPLICATIONS

SINGLE SOURCE OF SUPPLY — SPEEDY SHIPMENT — SOLVE TECHNICAL PROBLEMS — AND SAVE YOU MONEY

ROCKE INTERCONTINENTAL is the EXPORT DEPARTMENT for America's leading Communications and Broadcasting equipment manufacturers. As such, Rocke can deliver everything you need — one source, one shipment, one bill — to save you money, effort and time! Rocke Intercontinental service also includes complete specifications, design, local surveys, supervision of entire installations.

"SCOTCH" IS A REGISTERED TRADEMARK OF 3M COMPANY

More people use "SCOTCH" BRAND than any other magnetic tape in the world . . .

. . . and they use it in more ways because there is a specialized "SCOTCH" BRAND Magnetic Recording Tape for every purpose. "SCOTCH" BRAND pioneered such developments as *permanent silicone lubrication* to protect recording heads and extend the tape life; *all-weather polyester backings* for perfect performance in any climate; *tensilized super-thin polyester backings* that double recording time; *high-output* and *extra fidelity* tapes for critical recording needs.

All were developed by 3M research; are manufactured under the most exacting quality control standards. "SCOTCH" BRAND Magnetic Recording Tapes are *first* in radio, *first* in television, *first* in automation and instrumentation. They bring you professional quality at popular prices!

SHORTWAVE RADIO CONDITIONS DURING 1961

T. W. Bennington, Research Dept., BBC, England.

The activity of the sun, as indicated by the observations of sunspots and many other phenomena appearing on the solar disc, reached a peak at the epoch February/March 1958. At that time the sun's ultraviolet radiations arriving in the earth's outer atmosphere were also at a peak level. And it is these radiations which produce the earth's ionosphere, the "electrified" region which we use as a reflecting medium for our shortwave signals, and which prevents their escape into space and permits of their propagation to long distances over the earth's surface.

Since 1958 the solar activity has been decreasing towards a minimum level which is expected about 1965. At the time of writing (August 1960) the average Sunspot Number (which is a good indicator of the solar activity) has fallen from 201.3 in 1958 to a value of 128.6, and if the present rate of decrease is approximately maintained it should reach a value applicable to the end of 1961 of about 68.

So throughout 1961 the average solar activity is likely to go on steadily decreasing, not at a fast rate, but at a quite appreciable one. So much so that the decreasing amount of solar radiation falling on the ionosphere is likely, during the year, to bring about appreciable changes in the radio wavebands which are of best use for maintaining the long distance services. The shorter wavelengths in use at present are likely, either to become unusable, or to be usable over a shorter daily period than at present, and more use will have to be made of the longer wavelengths. That is a situation which is by no means an attractive one, for it means that, with more stations forced to use the longer wavelengths in the shortwave range, there will be a tendency for congestion of radio transmissions in these longer wavebands. However, the worst is not to come in 1961, but in the years nearer towards 1965, but who knows whether by that time some solution to the congestion problem may not have been found?

But, keeping to 1961, what changes in the usable wavelengths are likely to occur during the year? It is not possible, in this short article, to deal with these for a large number of circuits, but the Table may be helpful in indicating the probable best wavelengths for three directions from Europe, or vice versa, for good reception during different months and times of day. For shorter distances in the same directions the next longer wavelengths will probably be the best, but provided the distance is greater than 4000 kilometres the wavelengths shown should be usable. During times not shown the best waveband should be one between those given for the nearest times, except during the early morning, when it should be the next longer waveband to those given for the night period.

The wavebands shown in the Table are those for the broadcasting services, and it is evident that some pretty definite changes are likely to occur during the year. The daytime 11-metre waveband, which for the past several years has proved efficacious over many circuits, will, during 1961, become too short for use over all circuits, and the 13-metre waveband will take its place. On the North American circuit even that will be too short by the end of the year, and the 16-metre band will be the shortest usable. During the summer months the 16-metre band will be best for daytime use over southerly circuits, and the 19-metre band over the North American circuit. The evening wavelengths will change for southerly circuits from 19 metres at the beginning to 25 metres at the end of the year, and from 25 metres to 31 metres for the North American circuit. As for the deep night usable wavelengths they are likely to change for southerly circuits from 25 metres at the beginning to 31 metres at the end of the year, and for the North American circuit the 41 or 49 metre bands will be of best use during the winter season.

Ionospheric disturbances, which often cause interruptions to long distance communications, are known to be caused by particles of matter ejected from the sun during solar flares, and which, travelling at high velocities through the sun's corona, eventually reach the earth's atmosphere and produce various disturbing phenomena in the ionosphere. Since the flares are always associated with sunspots it might be thought, now that the sunspots are decreasing in numbers, we are likely to have less ionospheric disturbances. Unfortunately that is not so, for though, after sunspot maximum, the disturbances at first begin to decrease, then, a few years before sunspot minimum, particles begin to be ejected, not from flares, but from what are known as "M regions" on the sun. Instead of an "explosion" of particles from a flare the M region emits a relatively long-lived stream of them, which rotates with the sun and sweeps the earth every 27 days, causing disturances which recur at that interval of time. It may well be, therefore, that during 1961, we shall begin to get some of these recurring ionospheric disturbances.

Interesting new information is now being obtained about the nature of the solar particles which are emitted during flares, and about their terrestrial effects. It appears that some of the particles reach such very high velocities that they arrive in the earth's atmosphere on or two hours after the occurrence of the flare. Their effect is to cause a "black-out" of radio signals in regions surrounding the polar caps. The main body of the particles, however, possess less energy, and take about 26 hours to reach the earth. Their first effect is to cause a radio "black-out" in the ancoral regions, followed by an ionospheric disturbance, similar to that mentioned in the last paragraph, which spread through the high and middle latitudes of the earth.

RECEPTION OF TELEVISION AND V.H.F. TRANSMISSIONS

Television and v.h.f. transmissions for public reception are conducted on frequencies above 40 Mc/s (wavelengths shorter than about 7.5 metres) and on these frequencies the most important part of the radiated energy is the socalled "ground" wave. This consists of several components, but they all travel direct from transmitting to receiving aerial near to the surface of the earth. Under these conditions one would think that the distance range of the transmitter would be limited to the distance to which a straight line could be drawn between the two aerials without intercepting the curved surface of the earth. When the receiving aerial disappeared below the transmitting aerial's "horizon" it would be out of range. This, in practice, is not quite true, firstly, because a limited amount of radio energy is enabled to penetrate beyond the horizon by the process of diffraction or "bending" at the earth's surface, and, secondly, because the direct wave does not travel through the lower atmosphere in a perfectly straight line. Because of the variation in atmospheric pressure, temperature and moisture content with height above ground it follows, in fact, a slightly but continuously curving path, the curve being in the same direction as that of the earth but considerably more pronounced. Both of these effects enable the wave to be received at a workable level some small distance into the "shadow zone", so that the "radio horizon" is extended some way beyond the optical horizon.

It will easily be seen, however, that the distance at which a transmission is receivable will depend, primarily, upon the height above ground of the transmitting and receiving aerials, for increasing the height of either will, of course, extend the distance of the horizon. Other factors which affect the distance range are the power radiated from the transmitting aerial, the frequency used, the polarisation (vertical or horizontal) and the nature of the terrain (whether smooth or mountainous). As the strength of the received signal also varies considerably between the receiving locations in any area, it is usual to estimate the received signal strength which will be exceeded at 50% of the locations.

The Table below gives a rough idea of the maximum distances at which a workable signal could be expected in normal atmospheric conditions in a quiet country site, with a receiving aerial 10 m above the ground, for different transmitter powers and aerial heights. It applies to 50% of receiving locations for 50% of the time, is for a non-mountainous land path, and is approximately applicable over the whole v.h.f. band and for vertical and horizontal polarisation.

APPROXIMATE MAXIMUM DISTANCES FOR FAIRLY GOOD VHF RECEPTION

Power	Transmitting Aerial Height 200 m	Transmitting Aerial Height 300 m	Transmitting Aerial Height 400 m
	Distance (km)	Distance (km)	Distance (km)
10 kW	90	100	110
50 kW	110	120	130
100 kW	120	130	140
500 kW	150	160	170

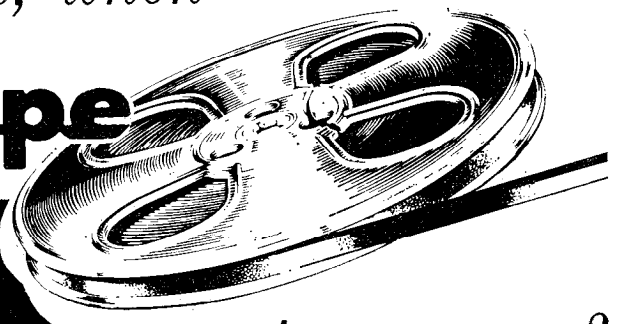
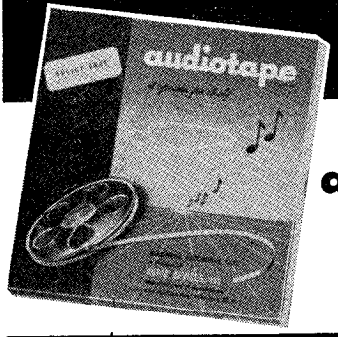
why settle for less, when

audiotape



costs no more?

AUDIOTAPE has:
excellent response at high and low frequencies – assures most faithful reproduction of all sounds, exceptionally low background noise; unequalled uniformity of output – guaranteed not to exceed ¼ db within the reel and ½ db from reel to reel. AUDIOTAPE oxides are magnetically oriented to provide increased output and reduced distortion. AUDIOTAPE is guaranteed splice-free in 1200 and 2500 ft. reels on 1½-mil plastic or "Mylar" base, and 1800 and 3600 ft. reels on 1-mil plastic or "Mylar". It has a moisture-repellent binder that assures smooth, quiet tape travel even under hot, humid conditions.



A Complete Line of the Finest Professional Quality Magnetic Sound Recording Tape

In this high fidelity age, the key to success in the recording business is QUALITY. Numerous broadcasting stations throughout the world found that AUDIOTAPE consistently delivers outstanding performance.

The complete line of professional quality AUDIOTAPE offers a base material and thickness to meet every recording need. And no matter which type you select, you can be sure you are getting the finest tape that can be produced. There is a complete range of reel sizes and types, too, including the easy-threading C-Slot reel for all 5 and 7-inch AUDIOTAPES.

AUDIOTAPE is available in the Regular Tape, Long-Recording Tape (50% more recording time), Super-Thin Tape, also the AUDIOFILM for the original recording of motion picture and TV sound.

This switch changes recording standards instantly

Now—manufactured by Ampex Electronics Ltd. in Great Britain—the 50-cycle Ampex Universal 351 professional audio tape recorder/reproducer instantly switchable between CCIR and NAB recording standards. This equalization feature means programs can be recorded for exchange with a single recorder, profitably extending the usefulness of the recorder in broadcasting and other professional recording applications. Offering 14 voltage taps between 90 and 250 volts, the Universal 351 recorder operates at peak efficiency over the ranges specified, ensuring consistently superior service over thousands of recording hours with minimum maintenance time and maximum operational economy. Available in console, portable, and rack configuration, or monophonic or stereophonic, the Ampex 50-cycle Universal 351 can be mounted to suit individual requirements. Its specifications demonstrate why the 351 series is the standard for monophonic and stereophonic broadcasting over much of the world.

Experience.

Five years worth. It shows in the advanced VR-1000C VIDEOTAPE* television recorder. The other is one of the earliest Ampex working models. Only five years separate the two. But that time gave Ampex the experience to produce more than 700 VIDEOTAPE television recorders which operate in stations on five continents and in 15 countries. Progress in television recording depends on Ampex experience. With world-wide distribution of VIDEOTAPE television recorders, Ampex has established a similar pattern of service. Ampex engineers make installations and are available always for consultations and assistance. They can demonstrate how shows taped on an Ampex can be exchanged with any other Ampex-equipped station operating on the same line standard or, by means of INTERSWITCH*, on any of the world's four standards. Major television networks and independent stations all over the world have taken advantage of Ampex experience. Among them are CBS, ABC, CBC, ATN, and the BBC. Their confidence has won for Ampex its international leadership in magnetic tape technology. For a list of Ampex-equipped stations in your area, and complete details, write: Ampex International S.A., 1 Rue des Pilettes, Fribourg, Switzerland.

AIR EXTERNAL SERVICES PUBLICATIONS

For overseas listeners to the short-wave transmissions of All India Radio, INDIA CALLING, a monthly programme journal in English, provides a service of advance programme information supplemented by some of the best broadcast talks on life in India today. It is published in three illustrated editions – Eastern, Western and European.

For listeners in West Asia, there are IDHAT-EL-HIND in Arabic, SADA-E-HIND in Persian and D'HIND AWAZ in Pushtu.

For East Asia, there is SUARA PENGHUBUNG published in Bhasa Indonesia and programme bulletins for Burmese, Chinese and Tibetan speaking listeners.

The journals are supplied free of cost to listeners in foreign countries. Requests may be forwarded either through the Indian diplomatic missions or direct to

THE DIRECTOR OF
EXTERNAL SERVICES
ALL INDIA RADIO
P. O. BOX 500, NEW DELHI

DA 59/92

The above remarks apply to normal v. h. f. transmission, but conditions sometimes occur which permit v. h. f. signals to be propagated to distances far beyond the radio horizon.

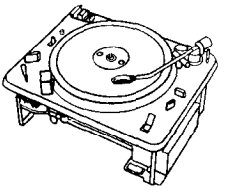
At times near sunspot maximum, when the F_2 layer of the ionosphere is particularly highly ionised, it may become capable, during daytime only, of reflecting radio waves in the v. h. f. band, and so of propagating them to very long distances, as it normally does with waves in the h. f. band. During years near sunspot maximum this type of propagation is more likely during the equinox and winter than during the summer, and to apply more particularly to the lower frequencies in the VHF band, say to frequencies below 60 Mc/s. Reception of such signals may occur as far as 12,000 km from the transmitting station, or even further, and although good sound reception may occur it is unlikely that good pictures will be received, owing to the unstable nature of the F_2 layer. Since we are now some 3 years past sunspot maximum it is unlikely that this kind of reception will occur very frequently during the next years.

However, VHF reception at distances between 800 and 2300 km can still occur by ionospheric reflection, but in this case by highly ionised patches which form in the E layer, and are known as Sporadic E. These are liable to occur, not only during sunspot maximum years, but during any year, but much more frequently during the four months centred on the summer solstice than during other months of the year. In winter they hardly ever occur and, in the summer, are much more frequent during daylight hours than during the night. Even in summer daytime they have no very set behaviour, but occur at odd times and last perhaps half-an-hour up to a few hours. Propagation by Sporadic E can occur on frequencies in the VHF band up to about 100 Mc/s, but usually only to the distances mentioned above. Good sound signals can be received and perhaps fair pictures may be obtained for short periods.

Lastly propagation of VHF signals to distances beyond the normal range can occur by "abnormal tropospheric propagation". This occurs when certain meteorological conditions prevail in the lower atmosphere, and particularly during anticyclones and periods of "settled" weather. Under these conditions refraction or "scattering" of the radio energy in VHF waves can take place at layers of air in the lower atmosphere which have different electrical characteristics from those of the air nearer the ground. Thus the VHF waves which are refracted or scattered from a moderate height above ground can travel to abnormally long distances, i. e. up to 800 km or more from the transmitting station. The meteorological conditions necessary for this type of propagation can occur at any time of day or season, and may last for many hours, though they are somewhat more prevalent in summer than during other seasons. V. H. F. reception of such signals may be subject to some fading, but it can cover all the VHF and television frequencies. Sound reception may be good, and picture reception fair, at the extended range whilst such conditions last.

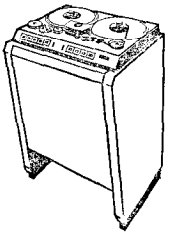
There is now the exciting possibility that, in the near future, it will be possible to conduct regular *long-distance* communication on VHF or even light frequencies via satellites which are simultaneously»visible« at two widely separated earth points. The satellites could be either passive i.e. used merely asa reflecting medium, or active i. e. possessing their own transmitters powered by solar batteries and capable of being actuated from the earth.

BROADCAST STUDIO EQUIPMENT



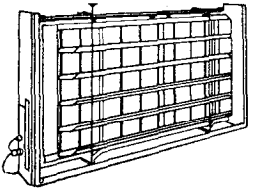
EMT 927
EMT 930

High-precision Transcription Turntables with dynamic pick-up, start-stop brake for remote controlled operation.



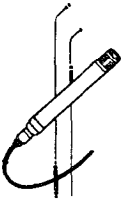
STUDER C 37

Magnetic Tape Recorder for Studio and outside broadcast application. Special features: Balance for constant tape tension, remote control of all operations.
Tape speeds: 7,5 and 15 i. p. s.



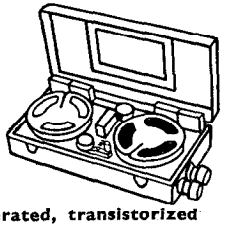
EMT 140

Reverberation Set for artificial echo effects with reverberation time adjustable between 1 and 5 seconds.



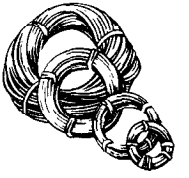
Dynamic and Condenser Microphones

for studio operation with directional and omnidirectional radiation characteristic.



STELLAVOX

Professional battery-operated, transistorized magnetic tape recorder.
Tape speed 7,5 i. p. s. Weight only 4 lbs.



Special Audio Frequency Cables

for studio purposes double screened, and especially HF proof.

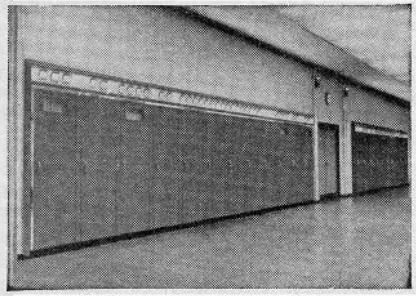
STUDIO CONTROL



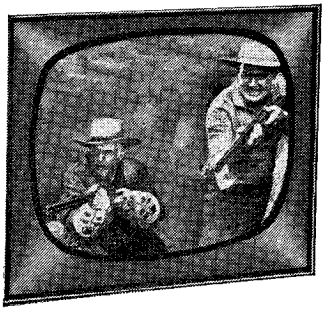
TRANSMITTER STATION

BUILDS COMPLETE STUDIOS

to transmit the programmes

Many countries owe their first glimpse of TV to the resource and enterprise of Pye. Today Pye transmission equipment is used by the television services of more than twenty-eight nations throughout the world. Even in such countries as America and Canada, where television is highly developed and keenly competitive, the Pye product is increasingly in demand. The company's pioneering work in the field of TV transmission and the succession of major developments which they have introduced have given Pye a place of leadership in the industry.

For full technical details write to Pye Ltd., Sales Dept., TV Transmission Division, Cambridge, England.



...and a wide range of domestic sets to receive them

Pye has also pioneered many of the outstanding advances in the design of domestic television receivers—such developments as the first transformerless TV, Automatic Picture Control, 13-channel tuning and the printed circuit. In many countries throughout the world the nightly TV programme is being received by Pye sets which benefit from the unsurpassed wealth of experience gained by this company in every field of radio and television. Today, the Pye trademark is accepted throughout the world, by producer and viewer alike, as a guarantee of quality, performance and reliability.

SOLAR ACTIVITY IN 1961

By Prof. Dr. M. Waldmeier, Director of EIDG. STERNWARTE, Observatoire Astron. Federal Zürich.

Prof. Dr. M. Waldmeier

The propagation of short radio waves is subjected to a diurnal, as well as to a seasonal variation, and in addition it is influenced by the year-to-year changes of sunspot activity. This solar activity shows a rather regular 11-year period. Its last maxima were recorded in 1937.4, in 1947,5. and in 1957.9, and the minium years were 1944 and 1954. Having taken regular measurements of the critical frequencies from vertical soundings for about 25 years, it has been found that the upper limit of the reflected frequencies increases in accordance with the degree of sunspot activity and amounts to about twice the value at sunspot maximum as at sunspot minimum. For this reason the short-wave stations change their wave-lengths in the course of the 11-year sunspot cycle. Considering that for nearly three cycles parallel observations of the Zurich Sunspot-Numbers and the critical frequencies have been available, the most favourable frequencies may be forecasted, supposed that we are able to predict the sunspot-numbers. But, only after having found important features of the sunspot variations it has become possible to give predictions of the sunspot-numbers. In 1935 the author detected some of the laws governing the solar activity, which enabled him to predict the course of sunspot activity in the years ahead. The predicted maximum value for 1937 was 124, whereas the highest smoothed relative-number amounted to 119, for 1947 the predicted value was 139 and the observations gave 152, and for the maximum in 1957 the prediction was $\geqslant 170$, whereas according to the observations the relative-number amounted to 201. As regards the last maximum its prediction was extremely difficult, considering that this cycle showed many anomalies and, in addition, during the whole 250 years of records there never occurred such an intense maximum. It is hardly necessary to mention that more accurate predictions can be given for shorter intervals. For many years the Swiss Shortwave Service emits regularly the daily relative-numbers for the expired month as well as predictions for the coming six months. The present emission-time-table is as follows:

Emission-times of the Sunspot-Relative-Numbers by the Swiss Broadcasting Corporation: Valid from 1. 11. 1960 to 30. 4. 1961.

Destination of Emission	Day of the month	Universal time	Wavelength		
England and Ireland	4th	18.50	41.61	31.43	
North America	5th	01.35 04.20	48.66	31.46	25.28
Australia, New Zealand	5th	07.20 09.05	25.28	16.87	13.94
South-East Asia, Japan	5th	12.50	16.87	13.94	
India, Pakistan, South Africa	5th	14.50	16.87	13.89	
Near East	5th	16.50	19.59	13.89	
Spain and Portugal	4th	21.15	31.43	25.28	
South America	4th 5th	23.30 03.45	31.46	25.28	19.59

At the beginning of the year 1961 the smoothed sunspot-number will be about 95, and it will decrease to about 72 by the end of the year. When we consider that there are sunspot maxima, which scarcely reach values of 50, the solar activity in the year 1961 is in fact still rather high. It is supposed to be higher than in the year 1955, but lower than it was in 1956. Accordingly, the conditions of short-wave transmissions will be between those of the years 1955 and 1956.

DX-PROGRAMMES

International Evangelical Radio Station

Emetteur Protestant International (EPI)

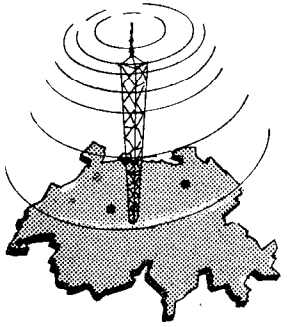
Internationaler Evangelischer Radiosender

Internationell Protestantisk Radiosändare

THE PROJECTED EUROPEAN PROTESTANT RADIO STATION IN SWITZERLAND BROADCASTING THE GOSPEL IN:

Arabic, Bulgarian, Czech-Slovak, Danish, Dutch, English, Esperanto, Finnish, French, German, Hebrew, Hungarian, Italian, Norwegian, Polish, Portuguese, Rumanian, Russian, Slovene, Spanish, Swedish.

- It is intended to broadcast 8 hours daily over several wave bands in sufficient power to cover all European countries and beyond.
- Leaders of State Churches and Free Evangelical Churches in 58 nations have given their support to the project.
- The Station will be under the supervision of an Interdenominational European Committee.



Details regarding this project are issued in "epi news service" (German, French, Italian, Dutch and Spanish editions are also available). For further information and FREE Radio Brochure, write to:

TABLE OF THE MOST SUITABLE METRE BANDS

FOR BEST SHORT-WAVE RECEPTION IN EVERY PART OF THE WORLD AT VARIOUS TIMES OF THE DAY IN 1961.

BY ROGER LEGGE, USA. Some adjacent listening/transmissions areas having similar propagation characteristics have been combined. The figures in the table can be regarded only as average figures.

Example: A listener located in the eastern part of No. Am. wishes to hear a station in the So. part of Af. on a Jan. evening (21 local time). By following the horizontal column starting at No. Am., East, on the left until it meets the vertical columns under the area So Af. Ea. in the section for the months Nov., Feb. on the right, he will come to the figure 25.

THE LISTENER'S AREA	Local time	AREA OF THE TRANSMITTING STATION																									
		MAY – AUGUST									MARCH–APRIL, SEPT.–OCT.									NOV.–FEB.

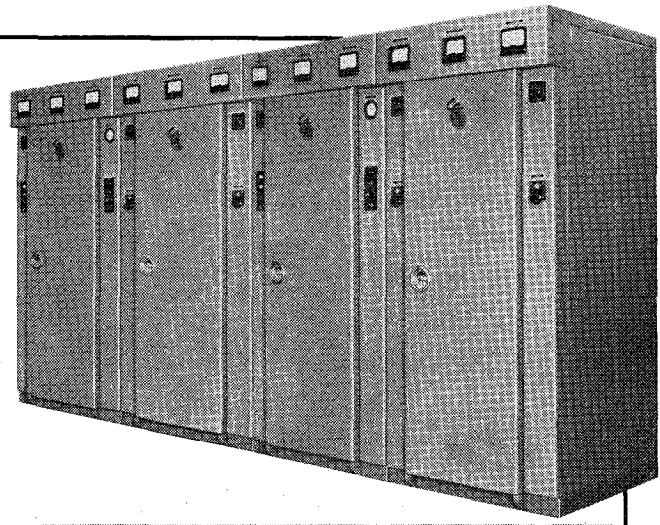
PROVEN PERFORMANCE



TYPE 317B 50,000 WATT AM TRANSMITTER

Quality you can see and hear in the Type 317B 50,000 watt AM Transmitter. High level screen modulation of the 5,000 watt RF driver stage makes possible the excellent performance. The amplifier is a high efficiency linear stage using the "Weldon Grounded Grid"* circuit.

All transmitter components, with the exception of the PA blower, are housed in five frameless aluminum cabinets. Dry rectifiers are used throughout, with selenium types used in the bias and low voltage circuits. Silicon rectifiers are used in the plate rectifier. Vacuum and ceramic capacitors are used in all RF tank circuits.

The driver stage may be optionally delivered as a complete, self-contained 5,000 watt or 10,000 watt transmitter, making it possible to cut-back and operate at 5,000 or 10,000 watts on an efficient, high quality basis, completely independent of the 50,000 watt amplifier and associated power supplies. All wiring required for Continental's Type TRC remote control equipment is included in the transmitter. Size: 78" high; 144" wide; 72" deep. Weight: approximately 10,000 lbs. (including blower). * U. S. Patent

QUALITY YOU CAN SEE AND HEAR!

Commercial and government stations throughout the world have installed these new Continental Electroniics Transmitters.

TYPE 315B/316B

5,000/10,000 watt AM Transmitter with instantaneous power cut-back to 1,000 or 5,000 watts. Factory equipped for remote control. Size: 78" high; 72" wide; 36" deep. Approx. net weight: 315B, 2,100 lbs.; 316B, 2,300 lbs.

TYPE 314D

1,000 watt AM Transmitter factory equipped for remote control. Size: 75" high; 32" wide; 32" deep. Approx. net weight: 1,100 lbs.

TYPE 105

1,000,000 watt transmitter designed and installed by Continental for VOA installations. Three of these transmitters have been in operation more than six years, two on standard broadcast range, one on low frequency range.

TYPE 420A

500,000 watt short wave transmitter designed and built by Continental for VOA.

ASSOCIATED TRANSMITTER EQUIPMENT

TYPE TRC transmitter Remote Control; dummy antennas; antenna coupling and phasing equipment; MAGNIPHASE® Line Protection System.

Designs include transmitters for VLF, LF, MF, HF, VHF, UHF and SHF services.

HOW TO USE THE WORLD RADIO TV HANDBOOK

The World Radio Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver. For the beginner, it will serve as an introduction to the thousands of stations broadcasting in all parts of the world. For the experienced listener, it will be an invaluable guide to program services of specific countries and an able assistant in identifying stations.

For many years international radio, particularly in the short-wave range ,has been a principal means of entertainment and enlightenment in some parts of the earth, such as the Pacific islands, sections of Africa and Latin America. In other areas, such as Europe, world broadcasting has been one of several major communications media.

The principal contents of this book are divided into two sections: 1) a listing by country of stations, programs, times, call signs, etc.; and 2) a listing by frequency and wave length of the main international long-, medium- and short-wave stations.

The first section, beginning on page 67, is divided into eight geographical categories: Europe, Africa, the Near East, the East, the Pacific, North America, Central America and South America. Countries are arranged alphabetically in each geographical category. The information on the broadcasting services of each country includes:

Local time in relation to Greenwich Mean Time; principal **Language or Languages** of the country; number of **Population;** total number of **Receivers in use** and in most cases the **Power** used.

Names and addresses of broadcasting companies (commercial broadcasts are identified as such).

Names and titles of leading officials of each company.

List of AM and FM stations operated by each company with call signs, frequencies, wave lengths and power expressed in kilowatts.

Every radio station whether in the long-, medium- or short-wave range, has an identifying call sign of three to five letters or a combination of letters and figures of which the first, or first two, denote nationality in accordance with the international list of prefixes (See page 64). Some stations - those in the United States, for example – always use these call signs when identifying themselves. Others do not.

Since many broadcast stations also operate FM and TV stations, a common practise is to authorize the use of the call letters of the AM stations followed by a dash and FM or TV, as the case may be.

Short-wave stations usually employ directional aerials to beam their programs to particular areas on frequencies and at times calculated for best reception. The reception areas give their names to the services, e.g.: European Service, Near Eastern Service, Latin-American Service, Far Eastern Service, etc. The language employed is that of the listeners in the area to which the broadcast is directed. The best reception usually is obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas. Short-wave propagation conditions change continually because of influences of daylight and darkness, seasonal considerations and solar activity. Consequently, good reception requires waveband changes from time to time.

Long- and medium-wave AM stations are divided into three categories: 1) **Main stations,** which are so powerful they generally can be received throughout the country of origin and often in neighboring countries. Most broadcasts emanate from these stations. – 2) **Regional stations,** which can be received only within a certain region of a country. Broadcasts normally consist partly of origin programs and partly of re-transmitted programs of main stations. – 3) **Relay and local stations,** which mostly re-transmit main-station programs. These stations have low power ratings and can be heard only within a limited area.

FM stations constitute another category. They give listeners an interference-free reception, but they have a short radius and are considered local stations.

Frequency and wavelength. Frequencies are measured in kilocycles per second (kc/s) and megacycles per second (mc/s). A kilocycle is 1,000 cycles; a megacycle is 1,000,000 cycles. Wavelengths are measured in metres (m) and divided into the following groups: long waves, medium waves and short waves (15–30,000 kc/s). The FM band (88–108 mc/s or 87.5–100 mc/s in European System) and TV band identified by frequency rather than wavelength are in the very high frequency (VHF). range: **Band I:** European 41–68 mc/s. American: 54–88 mc/s. **Band II:** European 174–223 mc/s American 174–216 mc/s.

An FM broadcast requires a channel 20 times wider than that used for AM, but a TV transmission of combined picture and sound needs about 6 times the spectrum space occupied by the entire AM medium wave broadcast band.

Every radio emission has a quantity measurable in both frequency and wave length and since the velocity of propagation in space, is in round figures, 300,000,000 meters per second, any one of the quantities-meters, kilocycles or megacycles – is readily converted into the other forms by means of the following formulae:

Meters to Kilocycles
Meters = 300,000/frequency (kc/s)
Kilocycles to Meters
Kilocycles = 300,000/Wavelength (meters)

Meters to Megacycles
Meters = 300/frequency (mc/s)
Megacycles to Meters
mc/s = 300/Wavelength (meters)

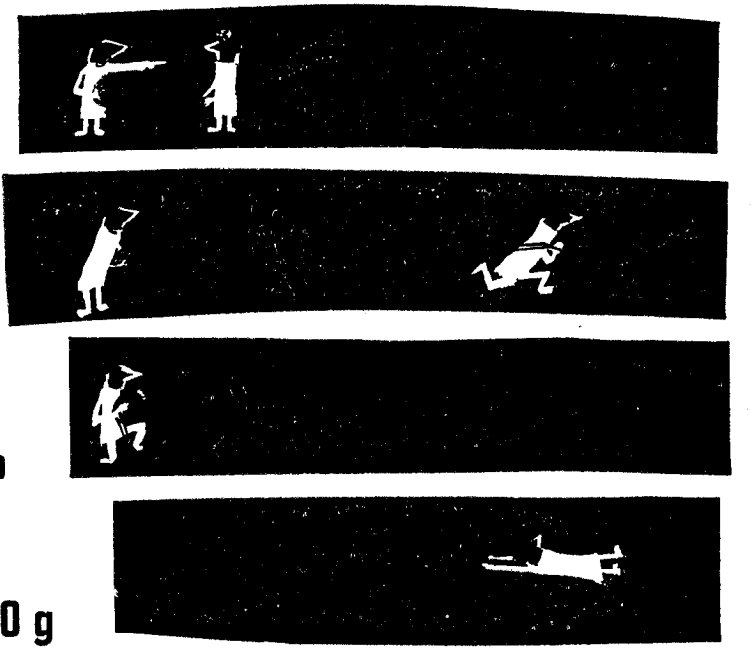
Withstands shock loads up to 3000 g



BASF MAGNETIC RECORDING TAPE LGR, a special quality of tape for use in radio and television, withstands high stresses of this kind without suffering any damage.

Broadcasting stations in Europe and overseas are also well aware of the special electro-acoustical properties of BASF MAGNETIC RECORDING TAPE LGR at all tape speeds: –

High peak record level
Perfect magnetic stability
Extremely low print-through
Almost noise-free

These outstanding electro-acoustical properties are achieved by the magnetic orientation.

In addition, BASF MAGNETIC RECORDING TAPE LGR is unaffected by humidity and has unlimited storage stability. It is the ideal tape for high-fidelity studio and archives recordings.

For tape recorder adjustments, BASF also supply DIN Calibration Tapes for 15, $7^1/_2$, and $3^3/_4$ i. p. s. tape speeds. These tapes have a reference tone, a section for head alignment, a frequency range section to adjust the response channel, and an unrecorded section to determine the optimum bias and the input equalization.

HOW TO USE THE WRH *continued from page 50.*

The majority of international short-wave broadcasts will be found on the following meter bands (m. b.): 49 m.b., 41 m.b., 31 m.b., 25 m.b., 19 m.b., 16 m.b., 13 m.b., and 11 m.b. The 31 m.b., 25 m.b., 19 m.b. and 16 m.b. are the most active of the eight bands and some of the most rewarding programs are found here. However, many short-wave stations operate outside these wave lengths. The 60 m.b. and 80 m.b. are used for local broadcasting (reception over relatively short distances), particularly in the USSR. South and Central America, Canada, Australia and in Central Africa, where short-wave broadcasting is an integral part of national domestic broadcasting.

In many parts of the world short-wave transmissions are picked up and re-broadcast from local stations or short-wave relay stations. In many territories, there are wire broadcasting services where the transmissions are centrally received and are then sent out by wire distribution systems.

Many programs are broadcast simultaneously from several transmitters on different wave lengths, enabling you to select the band most clearly audible in your area. If reception on one wave length is poor, you should examine conditions on others employed by the same station. On page 48 is a table of the most suitable bands for short-wave reception in every part of the world at various times of day throughout the year. In an article on page 34 T. W. Bennington tells you about the reception conditions of the different bands during 1960.

Program times used in the listings are based on the 24-hour clock. Midnight is 00.00 hrs., 3 a.m. is 03.00 hrs., 9 a.m. is 09.00 hrs. and midday is 12.00 hrs. Then, instead of starting another 12-hour cycle (p.m.), under the 24-hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hrs., 10 p.m. is 22.00 hrs., and so on until 23.59 hrs. (11:59 p.m.) is reached and a new 24-hour cycle starts. The system eliminates any possible confusion between times a.m. and times p.m. You can obtain the times in which transmissions of a particular programme and/or language are transmitted by running over the pages of the World Survey of Sound Broadcasting.

Time conversion. All programs are listed in GMT. To find the time when a program can be heard in your area it is necessary to equate both your local time and the time at broadcast point with Greenwich Mean Time (GMT). By referring to the World Time Table on page 62 you can determine how many hours your local time is ahead or behind GMT. The program listing for each country gives you the same information as regards point of broadcast. Suppose you live in Ottawa (5 hrs. behind GMT) and want to hear a program from Tokyo (9 hrs. ahead of GMT). The broadcast is at 16.00 hrs. local Tokyo time. This reduces to 07.00 hrs. GMT (16.00 hrs.—9 hrs. = 07.00). Remaining problem: when it's 07.00 hrs. GMT what will it be in local Ottawa time? Since Ottawa time is 5 hrs. behind GMT, this figure is subtracted from 07.00 hrs. and gives you 02.00 hrs. So to hear the program broadcast from Tokyo at 16.00 hrs., you must tune in at 02.00 hrs. Ottawa time. Daylight saving time adds an hour to local time, and the dates it is in effect in various parts of the world are noted in the World Time Table. If you are listening at sea you should consult the radio-officer for the difference between ship time at your position and GMT.

Daily programs. Under this heading in the listings you will find information concerning the total broadcasting hours on the different frequencies employed and in the different languages by a particular station, as well as surveys of the news and in many cases other fixed programs of interest such as folklore music, mailbag, language lessons, weather reports, time signals, etc.

Identification of stations. Language alone is not conclusive evidence of a station's nationality since international stations often beam broadcasts to foreign areas in the language of the listeners. Hearing a program in French or Spanish, for example, does not necessarily mean the station is French or Spanish. To make sure of correctly identifying a station it is necessary to wait for the identification announcement which every station broadcasts at regular intervals. Call signs and other means of identification are given in this book for practically all stations listed.

For identifying stations it also is important to know the signals used during the intervals between programs. Under each station, therefore, you will find an indication of the type of signal used, and in many cases a reproduction of the musical notes of the signal. Quite often one transmitter uses several wavelengths, as noted above, and employs different aerials designed to radiate signals to the best advantage in respect of each service. The various call signs sometimes are used in these instances to identify individual wavelengths.

The second section of this book lists long-, medium- and short-wave stations according to frequency and wavelength. The information includes call signs, location of station or stations on a given frequency and station power in terms in kilowatts.

How to identify a station by frequency or wavelength:

When you come across a station that is unknown to you, proceed as follows for identification: read the approximate frequency or wavelength indicated on your dial. Next, turn to the table: Short Wave stations of the world and—" and ascertain what stations are working in that neighbourhood, When you have narrowed the field to one or two possibilities and have noted details of the program and language, check these data against the program listings to determine whether the station is scheduled to be broadcasting at that time and the type of program listed. For confirmation it is advisable to wait for the station announcement or interval signal. *Continued page 54*

HOW TO USE THE WHR *continued from page 52*

Verification by QSL-cards. As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or letter. Most listings indicate whether a station uses QSL-card or answers by letter, and when return postage is required this is stated also. Return postage should be sent in the form of an International Reply Coupon, obtainable at post offices in the countries of the International Postal Union. Reports should be sent to the station address as given in the program listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

The "How to Listen to The World" (see adv. page 01) gives all necessary information about how to write reports to stations.

International television stations and programs for all parts of the world are listed in the section of this book beginning on page. 186

Other useful information includes a list of stations devoted to time signals and frequency-standards broadcasts on page 58, an index to broadcasting organizations on page 10 and religious broadcasting organizations incl. religious stations on the pages. 14, 16, 18.

The reception reports mentioned above are particulary useful to radio engineers in selecting the most suitable wave lengths for broadcasts beamed to your area. Reports are more meaningful if the SINPO or "555" code is used. The codes are as follows:

SINPO-code

S	I	N	P	O
5 excellent	5 nil	5 nil	5 nil	5 excellent
4 good	4 slight	4 slight	4 slight	4 good
3 fair	3 moderate	3 moderate	3 moderate	3 fair
2 poor	2 severe	2 severe	2 severe	2 poor
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable

S = Signal strength. I = interference. N = noise.
P = propagation disturbance. O = Overall merit.

"555"-code

S	I	O
0 inaudible	0 very strong	0 nil
1 very weak	1 strong	1 very poor
2 weak	2 fairly strong	2 poor
3 fairly strong	3 weak	3 fair
4 strong	4 very weak	4 good
5 very strong	5 none	5 very good

Example: 543 means a very strong signal with weak interference reducing the overall reception merit to fair.

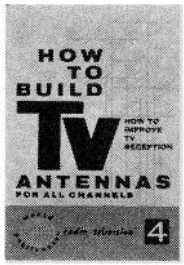
STANDARD HANDBOOKS ON RADIO AND TV

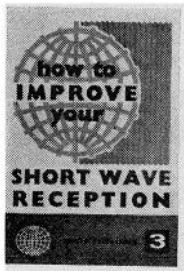


TV and FM ANTENNAS

Describes how to build TV and FM antennas for all channels. By F. Rydström, O. Engelstoft, and I. Fialla.

Explains *all problems* connected with TV and FM antennas and TV reception and with how-to-make-it articles dealing with *TV and FM antennas for all channels.*

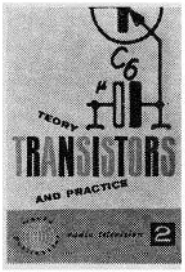
Price: Da. Kr. 12.75, £ 0/13/6, $ 2.-, DM 9.00, Sw. Kr. 9.75 plus postages: Da. Kr. 1.20, £ 0/1/3, $ 0.20, DM 0.75, Sw. Kr. 0.50. *Prices incl. postage:* Da. Kr. 14.00, £ 0/14/9, $ 2.20, DM 9.75. Sw. Kr. 10.25.



HOW TO IMPROVE YOUR SHORT WAVE RECEPTION

A practical handbook for short wave enthusiasts who wish to know all about short wave reception, the technical aids and means of improving it, and who wish themselves to build short wave receivers or means to improve short wave reception such as an effective short wave antenna, preselector etc.

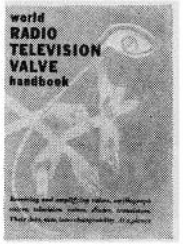
Prices: Da. Kr. 12.50, £ 0/13/6, $ 2.00, DM 9.00, Sw. Kr. 9.75 plus postages: As for: How to build TV-antennas. *Prices incl. postage:* Da. Kr. 13.70, £ 0/14/9, $ 2.20, DM 9.75, Sw. Kr. 10.25.



TRANSISTORS - theory and practice

An up to date and »how to build« handbook, which in an easy understandable manner and in a new way explains the theory and the practical use of transistors.

Prices: Da. Kr. 9.75, £ 0/9/6, $ 1.50, DM 6.00 plus postages: D. Kr. 0.60, £ 0/0/8, $ 0.10, DM 0.50, Sw. Kr. 0.50. *Prices incl postage:* Da. Kr. 10.35, £ 0/10/2, $ 1.60, DM 6.50, Sw. Kr. 8.00.



WORLD RADIO TELEVISION VALVE HANDBOOK

gives at a glance the correct answer to any practical question concerned with all type of valves, crystal diodes, and transistors of any make. Data, replacement or substitute valves, classification, base and pin connections.

Prices: D. Kr. 13.50, £ 0/13/6, $ 2.00, DM 9.00, Sw. Kr. 9.75, plus postages: As for: How to build TV-antennas. *Prices incl. postage:* Da. Kr. 14.70, £ 0/14/9, $ 2.20, DM 9.75, Sw. Kr. 10.75.

STANDARD FREQUENCIES

R. STATION WWY AND WWVH (Go.)

ADDR.: Nat. Bureau of Standards Boulder Laboratories, Boulder, Colorado, USA – WWV: Box 331, Route 1, Lanham, Maryland. **Te.:** GR4-5722 – WWVH: Box 578, Puunene, Maui, Hawaii. – **L.P.:** Chief, R. Broadc. Sce., R. Standards Laboratory: A. H. Morgan. Dir. Tec.: WWV: Fr. Sera. Dir. Tec.: WWVH: S. Katahara.

Standard Radio Frequencies: WWV: 2500 kc/s 120 m 1 kW – 5000 kc/s 60 m 8 kW – 10000 kc/s 30 m 9 kW – 15000 kc/s 20 m 9 kW – 20000 kc/s 15 m 1 kW – 25000 kc/s 12 m 0.1 kW. The Broadcasts are continuous, night and day, exc. WWV is off the air approx. 4 min. each h. The silent period commences at 45 min. plus 0 to 15 seconds, after each h.

WWVH: 5000 kc/s 60 m 2 kW – 10000 kc/s 30 m 2 kW – 15000 kc/s 20 m 2 kW.

WWVH is interrupted for approximately three minutes commencing about ten seconds after the beginning of each hour and each fifteen minute period thereafter; also for periods of 34 minutes each day beginning at 19.00.

Time signals: The audio frequencies are interrupted precisely three minutes before each h. and successive five min. periods. They are resumed precisely on the hour and each five min. thereafter; they mark accurately the hour and the successive 5-min. periods.

ANN.: "National Bureau of Standards, WWV, when the tone returns Eastern Standard Time is... AM or ...PM". – **V.** by QSL card or letter – **PUB:** Prgr. sched. on request.

NATIONAL PHYSICAL LABORATORY (Go.)

ADDR.: Teddington, Middlesex, Gt. Britain.

MSF Standard Frequency Service:

kc/s	m	kW		kc/s	m	kW	
60	5000	10	14.29–15.30	5000	60	0.5	continuous*
2500	120	0.5	– – – *	10000	30	0.5	– *

* exc. for break in transm. from 15–20 minutes past each h.

ANN.: Call sign 3 times in slow Morse. "This is MSF, Rugby transmitting standard radio frequencies on 2500, 5000 and 10000 kc/s, the frequencies being maintained constant within 5 parts in 10^9 by reference to an atomic standard". – **V.** by letter.

ROYAL GREENWICH OBSERVATORY

ADDR.: Time Dept., Herstmonceux Castle, Hailsham, Sussex, England.

The international time signals of the Royal Greenwich Observatory are radiated as follows: 10.00 on 13555 kc/s (GIC33) and 17685 kc/s (GIC37); 18.00 on 10332.5 kc/s (GPB30) and 17685 kc/s.

TIME SIGNAL FROM DOMINION OBSERVATORY, CANADA

ADDR.: Dominion Observatory, Dept. of Mines and Technical Surveys, Carling Av., Ottawa, Ontario. **Te.:** 2-8211, 10 c.4–5606 – **L.P.:** Dir. Adm.: Dr. C. S. Beals. Dir. Tec.: M. M. Thomson.

STATIONS: CHU 3330 kc/s 90.09 m 0.75 kW – 7335 kc/s 40.90 m 3 kW – 14670 kc/s 20.45 m 3 kW – **D.PRGR.:** 24 h. **Time Signals** only, in voice and seconds pulses – **ANN.:** Hours and minutes announced during the last 10 seconds of each minute: "Dominion Observatory, Canada, Eastern Standard Time... hours... minutes" – **V.** by QSL-card. – **PUB.:** Prgr. sched. free on request.

STATION JJY

ADDR.: R. Research Laboratories, Koganei-C, Tokyo, Japan.

Standard Freq.& Time Signals:

2500 kc/s 2 kW 06.59–22.59 — 10000 kc/s 2 kW 24 h. a day
5000 kc/s 2 kW 24 h. a day — 15000 kc/s 2 kW 24 h. a day

The st. off the air every 29–39 min. af the hour. – **V.** by QSL-card.

HBN NEUCHATEL OBSERVATORY

ADDR.: Neuchatel, Switzerland. **Cable:** Observatoire. **Te.:** (038) 5 1238. – **L.P.:** Dir.: J. Bonanomi, W. Schuler.

Standard Frequencies: 2500 kc/s: Sat. 07.05–Tues. 07.00, Wed. 07.05–Fri. 07.00. 5000 kc/s: Tues. 07.05–Wed. 07.00, Fri. 07.05–Sat. 07.00.

STATION LOL

ADDR.: Observatorio Naval del Ministerio de Marina Costanera Sud, Buenos Aires. – **L.P.:** Dir. Gen.: J. Marpegán.

Standard Freq. and Time Signals: LOL:

5000 kc/s 2 kW — 10000 kc/s 2 kW — 15000 kc/s 2 kW

D. exc. Sun. and holidays: 11.00–12.00, 14.00–15.00, 17.00–18.00, 20.00–21.00, 23.00–24.00.

Schedule: 4 min. dash (100 or 440 c/s alternately) beginning at 00.00, 00.05, 00.10 etc. Then 3×LOL in morse followed by ann.

STANDARD FREQUENCY STATION OMA

ADDR.: Prague, Czechoslovakia.

50 kc 5 kW: 24 h. – 2500 kc 1 kW: 24 h. – 3170 kc 8 kW: 18.00–24.00.

NATIONAL RESEARCH CENTRE OF TELECOMMUNICATIONS

ADDR.: Centre National d'Etudes des Télécommunications, Laboratoire de Bagneux, 196, rue de Paris, Bagneux (Seine), France.

FFH: 2500 kc/s 0.25 kW: Tues. & Fri. 08.30–16.30.

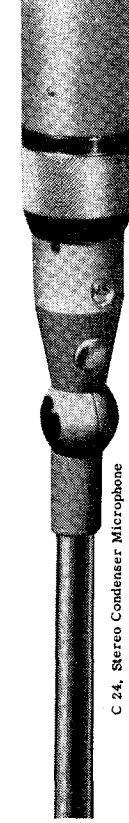
UNION OBSERVATORY SOUTH AFRICA

ADDR.: The Union Astronomer, Union Observatory, Johannesburg.

ZUO: 5000 kc/s 4 kW. – 10.000 kc/s 0.25 kW.

24 h. per day, interrupted from 15 to 25 min. past each h.

MICROPHONES FROM VIENNA



C 24, Stereo Condenser Microphone

WHERE THEY KNOW THE TRUE SOUND OF MUSIC

AKG has specialized in the development and manufacture of high quality microphones of the dynamic and condenser types.
Microphones for broadcast, tv and motion picture studios, for theaters and recording studios, for electro-acoustic installations, for tape recorders, movie projectors and communication systems are shipped all over the world.
Ask for detailed information and state your requirements.

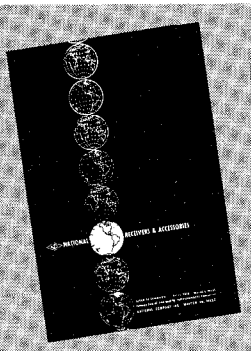
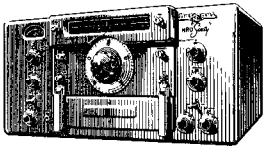
BURTON BROWNE/New York



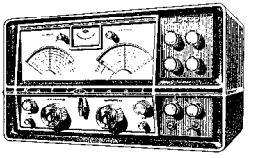
Send for this FREE National Catalog for up-to-date information on America's finest receivers!

Gives Complete Specifications, Full List of Accessories, Latest Prices on these Famous NATIONAL RECEIVERS.



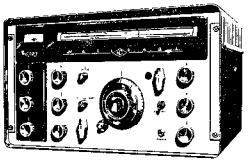
HRO-60

Features widest frequency coverage of any receiver available, 50 kc to 54 mc . . . the world's most famous receiver.



NC-400

National's newest general coverage receiver. Covers 540 kc to 31 mc in 7 bands. 18 tubes (including rectifier) AM-CW-SSB. May be used in fixed channel or diversity operation.



NC-303

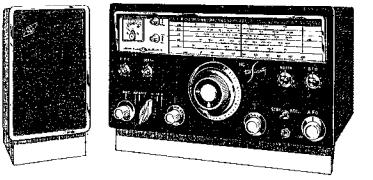
All "ham band" receiver with highest mechanical stability, lowest thermal drift and maximum SSB, AM and CW versatility. 10 separate dial scales cover 160 to $1^1/_4$ meters. Dual conversion. 5-position "IF Shift" for selectable sideband.

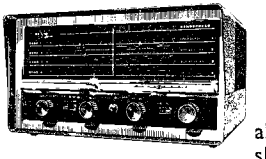
NC-66

AC/DC - Battery Portable. Covers 150 kc to 23 mc in 5 bands . . . only receiver at its price with calibrated coverage of CONSOLAN. Exclusive RDF-66 Direction Finder Accessory provides accurate navigation for small boats.

NC-270
"COSMIC BLUE"

National's newest! Dual conversion "ham band" receiver . . . 6 meter coverage; features the exclusive Ferrite Filter* for instant upper-lower SSB, CW and AM selectivity and it provides an average "Q" of 500 at 230 kc . . . in new duo-tone Cosmic Blue cabinet; plus Flip Foot for maximum operating convenience.
*Patent pending.





NC-60

Special

. . . FIRST all-new, low-priced shortwave/standard broadcast receiver in over 10 years! Covers 540 kc to 31 mc in 4 bands. 110 volt AC/DC. Built-in speaker.

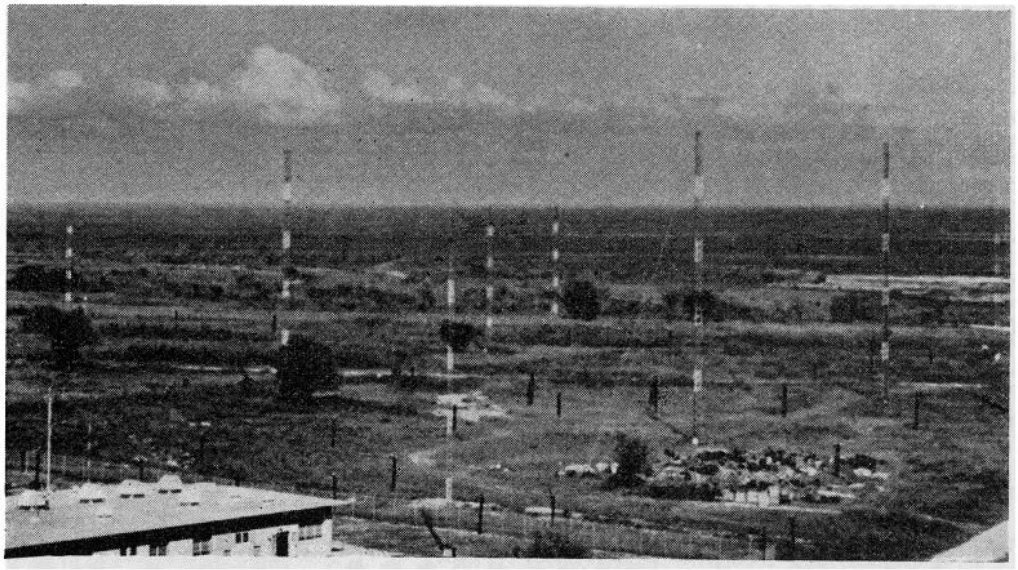
DESIGNED AND INSTALLED BY PAGE...



BROADCAST SYSTEMS REACHING THE PEOPLE OF OVER 100 NATIONS

Page Communications Engineers, Inc., known the world over for quality communications systems, has designed and installed many of the most powerful medium frequency broadcast stations now in operation. These Page-built stations are providing the peoples of over 100 nations dependable, around-the-clock broadcasting service . . . *in many instances for the first time.*

Two of the world's most powerful transmitters (1 megawatt), were designed, built and installed by Page on Luzon in the Philippines, and on Okinawa for the U.S. Information Agency's Voice of America. The world's largest VOA radio relay shortwave transmitter at Tangier, North Africa, and a fourth VOA installation at Monrovia, Liberia, are other Page projects. They also conducted the extensive broadcast study upon which the VOA's European coverage is predicated, and they planned some of the initial broadcast facilities for TV stations in Cuba, Brazil, and in other Latin and South American countries.

In Korea, Page studies led to plans for modernizing and extending the Korean Broadcasting Network. They recently built the Kingdom of Libya's first broadcasting network.

Page's experience in engineering complete broadcast facilities anywhere in the world is unequalled . . . anywhere in the world. For additional information, write to:

Page

2001 WISCONSIN AVENUE, N.W., WASHINGTON 7, D.C., U.S.A.

FREQUENCY BANDS ALLOCATED TO BROADCASTING, TELEVISION AND AMATEURS

The table is based upon the Geneva Regulations 1959. Some bands are shared with other services. In certain countries exceptions from the table below apply. **Region 1:** Europe, U.S.S.R. in Asia, Africa. **Region 2:** N. and S. America, Northeast Pacific. **Region 3:** Asia exc. U.S.S.R., Australia, N. Zealand, part of Pacific.

HIGH FIDELITY BROADCASTING FROM COLLINS

your one complete source for quality broadcasting equipment

Collins' equipment is designed for economical, high fidelity radio broadcasting. Collins high fidelity transmitters deliver greater audio range with minimum distortion. Typical audio frequency response is within ±1.5 db from 30 to 15,000 cps. Distortion is less than 3% from 30 to 15,000 cps for 95% modulation. And Collins has it all — a complete radio station — from microphone to antenna — your complete broadcast equipment source.

AM TRANSMITTERS

21E/M 5/10 kw Transmitters—feature for feature the most economical transmitter available, extremely stable vacuum type crystals eliminate need for crystal ovens. Conservatively rated components, easy access to all components, forced air cooling, long tube life, compact size. Circuitry is simplified, with only ten tube types in the 21E/M.

20V 1000/500 watt, 550A 500/250 watt, 300J 250/100 watt Transmitters — each housed in a single identical cabinet. Same fine features as 21E/M.

POWER INCREASE PACKAGES

Increase 300J, 550A, 21E Power Overnight — That's as long as it takes to install the Collins Power Increase Package. You don't lose a minute of commercial time — start with sign-off and by sign-on the next day you operate the 300 J at 500 or 1,000 watts, 550A at 1,000 watts, the 21E at 10,000 watts. This money-saving service is typical of the advanced design and quality engineering in all Collins Broadcast Equipment.

SPEECH INPUT CONSOLES

212F and 212E—supply complete control over simultaneous broadcasting and auditioning. 212F single channel from any of 12 possible inputs. 212E dual channel from 22 possible inputs. Both monitor program and remote lines, control speakers and warning lights.

REMOTE AMPLIFIERS

212Z—lightweight, ruggedly constructed remote four-channel transistorized unit weighs only 22 lbs. with batteries, comes in typewriter size carrying case. Built-in tone oscillator for line level set up and automatic power changeover.

Micromote Transistorized Remote Amplifier — *Weighs only 10 oz. complete. Fits into* coat pocket or on belt. Contains six transistors and four 200-hour mercury batteries. Comes complete with ear-plug head phone and with or without Turner 58A lavalier microphone.

TURNTABLE EQUIPMENT

TT-400/200—3 moving parts in drive mechanism; 3 speed selector; unique 7″ indentation for 45 rpm discs. Available in 16″ 4-pole (TT-400) or synchronous (TT-400S) and 12″ 4-pole (TT-200) or synchronous (TT-200S).

Custom Control Desk—Individually designed to your requirements at low cost. Ask for a proposal.

Whatever your broadcast needs, specify Collins, your complete source for quality broadcast equipment. For complete information call or write us.

The new magnetic tape **GEVASONOR**

Ease of editing is one of the several advantages of using flangeless spools, but their use involves a risk that the tape may ride up without warning and cause a jam. This, of course, will occur only with tapes that do not run absolutely flat. It is therefore advisable to use tapes that remain perfectly flat when running off and on the spools.

GEVASONOR type F has a special nonslip back coating that guarantees this. Even at the highest rewinding speeds, there is no danger of a jam.

GEVASONOR type F is supplied in 1000-metre reels (3290 feet) on 100-mm A.E.G. cores. A 293-mm backing plate can be supplied separately.

GEVASONOR type F is packed in cartons convenient for tape librairies.

The particles of iron oxide are orientated, for maximum sensitivity and minimum noise. Even at low tape-speeds, the treble is well reproduced.

For portable machines GEVASONOR type M tape is recommended. Except for a smooth back coating, it has the same characteristics as type F.

Type M is supplied on plastic spools, specially designed to be readily mounted on the spindle with one hand. (Spool diameters available are 13, 15, 18 and 25 cm.)

Tapes types M and F have a thickness of about 0.05 mm. The base is of cellulose triacetate, giving very little stretch so that negligible loss in quality is caused by excessive tape tension.

Every two months first-hand information on the world of broadcasting is offered to you in the

E. B. U. REVIEW

published by the European Broadcasting Union

Part A – Technical – will keep you up-to-date regarding the long- and medium-wave situation in the European Broadcasting Area and

the latest developments in the television and sound broadcasting networks on metric waves,

including such questions as

wave propagation and frequency assignments in all of the broadcasting bands,

the installation and operation of transmitting stations and studio centres, of recording systems and outside-broadcast facilities, both for sound and television,

Eurovision, etc.

Part B – General and Legal – will inform you of administrative, programme and legal developments in radio and television throughout the world

such as

the activities of international organisations concerned with broadcasting in all non-technical fields,

the progress of radio and television organisations in most countries from the point of view of administration, finance and programmes,

analyses of new Copyright Acts and all legislation and jurisprudence touching upon broadcasting.

ANNUAL SUBSCRIPTION:

Part A (six numbers): price 150 Belgian francs. Publishers: E. B. U. Technical Centre 32, Avenue Albert Lancaster, Bruxelles (Belgium).

Part B (six numbers): price 15 Swiss francs. Publishers: E. B. U. Administrative Office, 1, rue de Varembé, Geneva (Switzerland).

A combined subscription to Parts A and B (twelve numbers) may be ordered either from Brussels or from Geneva (price 300 Belgian francs or 27 Swiss francs).

BBC PUBLICATIONS

The Listener
and B.B.C. Television Review

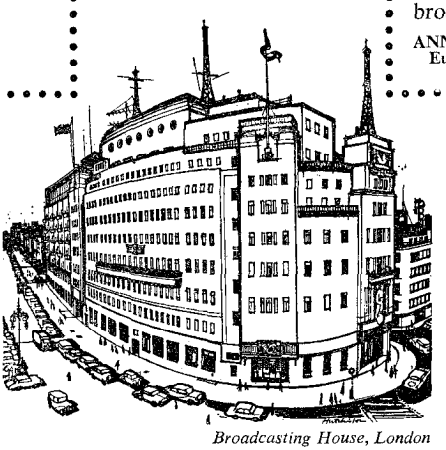
International experts in every field—in current affairs, the arts, science and religion—broadcast for the BBC in Sound and Television. The best of these broadcasts are published every week in *The Listener*.

ANNUAL SUBSCRIPTION 37s.

LondonCalling

A weekly bulletin giving the week's BBC overseas programmes in detail, with notes about outstanding broadcasts. Printed on air mail paper, *London Calling* reaches listeners throughout the world ahead of the broadcasts.

ANNUAL SUBSCRIPTION Airmail 30s. Europe (by surface mail) 10s.



Broadcasting House, London

London Calling Europe

Advance schedules of the BBC European Service broadcasts in English and in many other languages appear weekly in *London Calling Europe*. Texts of 'English by Radio' lessons and articles about the programmes are included.

ANNUAL SUBSCRIPTION 5s. (French edition 7s. 6d.)

HIER SPRICHT LONDON

A weekly magazine in German containing advance details of a week's broadcasts in the BBC European Service in English and German. These include the daily English-teaching programmes, invaluable for language teachers and students. Texts of some of these lessons appear in *Hier Spricht London*.

ANNUAL SUBSCRIPTION 15s.

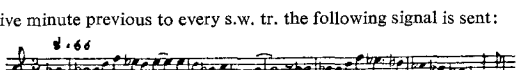
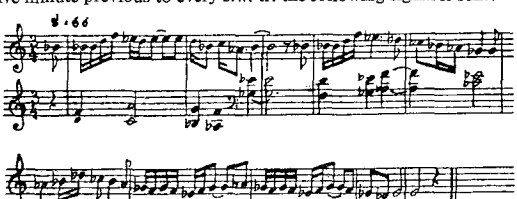
For Nowegian Seamen in the No. Atlantic and No. Sea:
ANN.: "This is Radio Norway with its shortwave service for Norwegians abroad".
INT.-SIG.: Every s.w. transmission is introduced by the following theme, which originates from an ancient folk tune from Hallingdal



Five minute previous to every s.w. tr. the following signal is sent:



Message to our English-speaking audience: In our daily prgrs. for Norwegians abroad we will usually have a section of Norwegian music or music presented by Norwegian artists. This musical section, which lasts 15 to 20 minutes, is introduced in **English** as well as in **Norwegian.** On Wed. and Sat. you can listen to our "**Letter Box Programme**", in which we play our listeners' **request records.** We often receive letters from listeners in Norway with request to play a record with a greeting to one of their relatives abroad, but we regret to be unable to comply with these requests. Every Sunday we have an additional prgr. in English, "**Norway this week**", in which we try to present Norway in different ways through music and feature prgrs. We are very grateful for comments on our transmissions. Reports are answered by QSL-card. Return postage is not necessary. Our postal address is: **RADIO NORWAY**, Oslo, Norway.
PUB.: Programbladet (weekly). Prgr. schedule free on request.

The Broadcasting House in Moscow

HERE IS MOSCOW RADIO

Moscow Radio transmits to listeners abroad on short and medium waves in 38 foreign languages and 8 of the languages spoken by the peoples of the Soviet Union.

In its broadcasts Moscow Radio gives accounts of life in the Soviet Union and of the most important international events.

Moscow Radio's transmissions comprise news, comments, conversations, interviews, reportages and special programmes for women, children and young people. There are also scientific and technical, sports and musical programmes.

To the microphone of Moscov Radio come Soviet Russian statesmen, prominent Soviet-Russian scientists and cultural personalities, and foreign visitors, politicians and other public personalities, representatives of business circles, scientists, artists, workers and peasants.

Moscow Radio answers letters from its listeners in broadcasts and by post. Request concerts are broadcast and various competitions arranged with prizes for the winners.

Department of Information and Press Service

Foreign correspondents, photographers, cameramen and news agency representatives visiting Iran will be given every assistance and guidance, during their stay in this country, by members of the above department. Early notification to this department of their date of arrival would enable us to prepare suitable itinerary including meetings with personalities and visits to historical and development sites.

ADDRESS:
Gen. Dept. of Pubs. and Broadcasting, Meiden Ark, TEHRAN, IRAN

TELEPHONE: *56718*

International Exchange Service

A special division has been established to conduct an international exchange programme of news, publications, documentary films, recorded music, photographs, broadcasting experts and radio technicians on reciprocal basis.

Interested Broadcasting Organizations throughout the world are invited to contact the General Adm. of Pubs. and Broadcasting, Maidan Ark, Tehran, Iran, for fuller details.

RELAY STATIONS:
For frequencies of the relay stations, refer to the individual countries: Germany, Greece, Dodecanese Islands, Great Britain, Tangier, Ceylon, Hawaii, Ruykyu Islands, and Philippines.

ANNOUNCEMENT:
Each program ends with these words spoken in English: "This program has come to you from the United States of America". The station identification is then announced in English.

INTERVAL SIGNAL:
Choir of brass playing a 10 note version of "Columbia, the Gem of the Ocean". This musical symbol is played at the beginning of a transmission, during station breaks, and at the conclusion of a transmission. At the beginning of a transmission the sign on announcement is followed by 3 minutes of musical symbol made up of alternate 5 seconds music and 5 seconds silence.

VERIFICATION by QSL-card. No return postage required.

FUTURE PLANS:
When the Voice of America's East Coast facility in the U.S. is completed in 1962, there will be six 500 kW short-wave transmitters as well as six 250 kW's, not only to permit reception in Europe and parts of Africa, but also to improve the quality of our signals rebroadcast by our relay bases in Europe and the Mediterranean.

ARMED FORCES RADIO and TELEVISION SERVICE

ADDR.: Office of Armed Forces Information and Education, Washington 25, D.C. – **FI.:** By State (Dept. of Defense).
This office exercises over-all policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep U.S. Service men and women stationed outside the States the best informed service personnel in the world on current events. **All broadcasts are in English.** News, sports and other timely matter is beamed overseas directly by ten powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced prgrs. are derived directly from the U.S. Commercial radio and tv. networks. N. is compiled from the wires of A.P. and U.P.I. Regular shortwave prgr's are presented daily from both Los Angeles and New York City, over the tr's of the V.O.A. The operational headquarters of AFRTS, at Los Angeles, ships undated radio and tv. prgrs. on transcription and film, respectively, to overseas stations, and controls the Pacific Shortwave Service. Officer in Charge: Lt. Colonel Lother B. Sibert, USA.

EUROPEAN SERVICE (from New York).
ADDR.: Armed Forces Press, Radio and Television Service, 250 West 57th Str., New York 19, N.Y. –

EDUCATIONAL STATIONS (non. comm.)

ADDR.: Office of Education, Washington 25, D.C. – **L.P.:** Chief Radio-Television: Dr. Franklin Dunham.
Educational and Television Center: Coliseum Bldg., Columbus Circle, New York City, N.Y.
NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS (NAEB.)
FI.: By membership fees. Also support from foundations. The national independent professional association, which since 1925 has represented the interests and needs of educational television and radio broadcasters, represents appr. 75% of the educational stations and production centers of the United States (appr. 90% exc. those identified as religious st.).
ADDR.: Executive Office: 119 Gregory Hall, Urbana, Illinois. **Te.:** Empire 7–6611, Ex. 33. – **L.P.:** Pres.: William G. Hanley. Adm. Vice Pres.: H. E. Hill.
Stations: 159 educational institutions and organizations owning and operating a total of 160 educational radio and 43 TV st's.
Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public sce's., radio and TV st's and production centers. Its services include workshops, seminars, regional and national annual conferences, personnel-upgrading sce's., and employment agency, legal, research and other operational consultant sce's., and numerous publications in radio and TV, incl. a monthly Newsletter and a bi-monthly journal (available by subscription abroad at $5.00 per year). It has an exchange-advisory membership relationship with most national educational organizations. The NAEB also operates a radio network which duplicates via tape and distributes to membersf's. ten hours of programming per week. At present there are some 115 st's. in this network. Exchanges of prgr's. with other nations are welcomed. It also actively cooperates with various international organizations (European Broadcasting Union, UNESCO etc.), and the national systems of various other countries (R.T.F., BBC, RAI, CBC and others), exchanging prgr's., publications and personnel with the broadcasting organizations of over 20 nations in Europe, Asia, Australia and Africa as well as those in No., C. and So. America. According to federal communications commission regulations, non-comm. educational FM st's. have no restrictions on transmission time:

COMMERCIAL STATIONS

M.W. Stations operating with a power of 10 kW and above. The time each station is authorized to operate is indicated in the list. Each station is required to operate at least two-thirds of the hours it is authorized to operate between 6:00 AM and 6:00 PM, and two-thirds of hours it is authorized to operate between 6:00 PM and midnight. If authorized to operate unlimited time, it may operate for the entire 24 h.

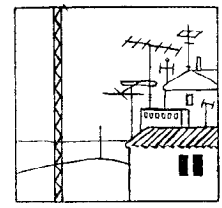
WORLD TELEVISION



The principal television systems:
Definition refers to the broadcasts standard which is normally stated in terms of the number of lines which make up the image. Reference in the following surveys is made throughout merely to 405 lines, 525 lines, 625 lines (CCIR*), 625 lines (Soviet**) and 819 lines respectively. Details of these five definitions are given in the following table:

	Systems			
Number of lines per picture	405	525	625*	819
Video bandwidth (mc/s)	3	4	5	10.4
Channelwidth (mc/s)	5	6	7	14
Sound carrier relative to vision carrier	+3.5	+4.5	+5.5	+11.15
(Sound carrier relative to edge of channel)	+0.25	+0.25	+0.25	+0.10
Interlace	2/1	2/1	2/1	2/1
Line frequency (c/s)	10.125	15.750	15.625	20.475
Field frequency (c/s)	50	60	50	50
Picture frequency (c/s)	25	30	25	25
Sense of vision modulation	Positive	Negative	Negative	Positive
Level of black as percentage of peak carrier	30	75	75	25
Sound modulation	AM	FM	FM	AM

* The International Radio Consultative Committee.
** The characteristics are the same as 625 lines CCIR exc. for a difference in bandwidth: video bandwidth 6 mc/s, channelwidth 8 mc/s, sound carrier relative to vision carrier + 6.5 mc/s.

Differences in Belgian TV from resp. CCIR 625 and French 819:

	CCIR 625	Belgian 625	French 819	Belgian 819
Video bandwidth (mc/s)			10,4	5
Channelwidth (mc/s)			14	7
Sound relative to vision			+11,15	+5,5
Sound relative to edge of ch.			+0.10	+0,25
Vision modulation	Negative	Positive		
Level of black as percentage of peak carrier	75	25		
Sound modulation	FM	AM		

The following pages give you the data of the different TV stations of the world. The channel is indicated by a letter followed by a figure. The letter indicates the technical data of the systems which are in use (A: American, B: British etc.) and the figures is the channel number.
The powers for vision and sound are indicated by a fraction, the numerator indicating the number of kW (ERP) for vision and the denominator for sound, for example 6/1.5 means vision 6 kW ERP and sound 1.5 kW ERP.

EDUCATIONAL TV-STATIONS

The 64 operating TV educational stations are mainly situated in the large cities and university centres. They are of three types: 1) Community stations supported by voluntary funds; 2) University stations supported by State and local budgets; 3) State-owned networks covering entire divisions of the country supported entirely by taxation. An interesting development for educational purpose is closed-circuit TV, limited to universities and to individual school-systems. A prgr. sce. known as the National Educational Television and Radio Center located at Coliseum Bldg., Columbus Circle, New York City, N.Y., supplies educational TV prgrs. to the present stations and in addition, distributes its prgr's to both closed circuit and film projectors which are in use in thousands of schools.

GAZETTE

International Quarterly of Mass Communications Studies

Press – Radio – Television – Propaganda
Public Opinion – Advertising
Public Relations

Editors: K. Baschwitz, Holland – S. Frey, Switzerland – A. S. Khurshid, Pakistan R. Nafziger, U.S.A. – M. Rooij, Holland

Publisher: H. E. Stenfert Kroese N.V., Leiden, Holland

Annual subscription post free fl. 15.50

The articles, reviews, communications, etc. in Gazette are published in the English language. An exception is made, however, for some articles written in French and German, which are published in their original language, but always with the addition of an English summary.

Gazette can be ordered through a bookseller or direct from the publisher.

History

IN THE MAKING

Today's Headlines — *tomorrow's history*

55 B.C. Julius Caesar lands in Britain. History is being made. Had there been cameras, Visnews would have been there recording the event.

Somewhere in the world something is happening NOW which will hit tomorrow's headlines and a *VISNEWS* cameraman is there filming it.

The Visnews organisation is world wide — its business is news — news for your programme. Newsfilm reaches subscribers as fast as modern transport travels.

VISNEWS BY BCINA

For the Newsfilm Service you cannot afford to be without, write to:

BRITISH COMMONWEALTH INTERNATIONAL NEWSFILM AGENCY, SCHOOL ROAD, LONDON, N.W.10, ENGLAND

TELEPHONE: ELGAR 7733 *CABLES: VISNEWS LONDON* *TELEX: 22678/9*

SHORT WAVE MAGAZINE

(Established 1937)

One of the world's leading Amateur Radio publications covering transmission, reception, operating results, competitive working, design and construction. Regular features include "DX Commentary"and "VHF Bands", outstanding in their fields, issuing wide range of Achievement (DX) Certificates – FBA (Four Band Award), PRA (Polar Regions Award), WBC (Worked British Counties), WFE (Worked Far East), WNACA (Worked North American Call Areas) and VHFCC (VHF Century Club).

Monthly, 56 pages. Subscription 33s. post free. 34 Danish Kr., 5.00 American dollars, 21.45 Swiss francs, 1650 French francs, 20 German Dm., 2885 Italian lire.

Specimen Copy: Five IRC's.

SHORT WAVE MAGAZINE LTD.,

55, Victoria Street, London S.W. 1, England.

SHORT WAVE STATIONS OF THE WORLD

Moscow frequencies are omitted from the list as they are changed very often. All the Moscow frequencies reported are shown in the USSR-text. – * Standard Frequency Station Time Signal Station. Br. = Brazil, Cl. = Cultura, Col. = Colombia, Czecho. = Czechoslovakia, Ger. = Germany, Guat. = Guatemala, Hon. = Honduras, Isl. = Island. Venez. = Venezuela.**

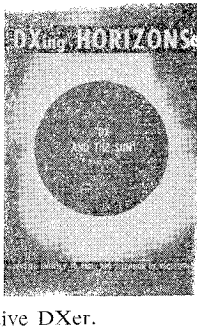
DXing HORIZONS MAGAZINE

Only 12 issues old and already

"The DXers Equivalent To The Hams QST..."

Written, edited and prepared by and for
DX enthusiasts the world over.

Available to any country in the world — $ 4.00 per year.



DXing HORIZONS... The only magazine in the world with complete Shortwave — Medium Wave — Television and FM DX news for the active DXer.

For Shortwavers... "WORLD AT A TWIRL," the most complete shortwave station and operating news section in print. Edited by world famous dean of the SWL's, Ken Boord, Morgantown, West Virginia, U.S.A. A shortwave DXer — saluted each month in word and picture. A shortwave station, saluted each month. Articles on antenna construction, shortwave propagation, receivers... everything shortwave!

For Medium Wavers... A complete news section devoted entirely to international Medium Wave DXing. MW news from around the world!

There has never been a publication like DXing Horizons! You are missing a world of DX information, if you are not a subscriber! All news is as fresh as can be obtained in any publication... club bulletins included! Subscribe today, $ 4.00 per year (by International Money Order, Cheque payable in the United States) or send two IRC's for a sample copy.

Monthly — A full set of Shortwave-Medium Wave propagation charts, predicting and analyzing conditions, by Stan Leinwoll, **"Radio Frequency-Propagation Manager"**, Radio Free Europe.

is the Club for You: You will receive our monthly printed bulletin DX-Radio a whole year together with the Short-Wave-Logg with timeschedule, the only one in the World? Ask sample, free of charge.

Annual subscription Cr.s 10:—.

SRK, Box 5083, Stockholm 5, Sweden

WORLD WIDE DX LEAGUE

An International Organization sponsored by the DXing departments of DXing Horizons Magazine

The WORLD WIDE DX LEAGUE has been formed to further enhance the bonds of world-wide friendship, brotherhood and common knowledge, through the pursuit of DX radio signals.

The WORLD WIDE DX LEAGUE offers the world's only complete set of DXing awards, including award certificates for Shortwave, Medium Wave, TV and FM.

DXing Horizons has formed the WORLD WIDE DX LEAGUE to serve DXers much in the same way the world famous American Radio Relay League serves hams. To support the League is to support DXing in all of its forms.

LIFETIME MEMBERSHIP — $2.00

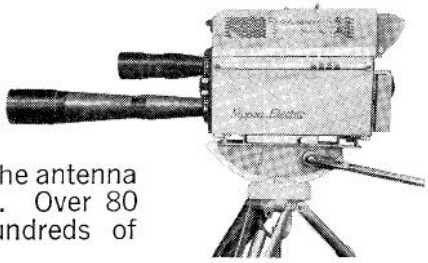
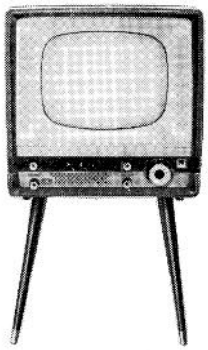
NEC HAS EVERYTHING FOR TV BROADCAST



From image orthicon camera chain right through to the antenna —NEC manufactures matched TV station equipment. Over 80 installations, from 1 kw to 50 kw, have logged hundreds of thousands of hours of trouble-free operation.

Wave characteristics meet the requirements of all radio regulatory groups. The wide band characteristic, good linearity and transient response give picture reception unsurpassed by any other equipment.



You can take advantage of this rich video experience by contacting NEC at the early planning stage. NEC's one-contract turnkey service can mean a considerable saving in time and money. Write for brochure describing a typical NEC 10/50 kw TV broadcasting system.
